Nanoparticles in medicine and environment J.C. Marijnissen, Leon Gradon, 2009-12-01 A huge effort is put into the science of nanoparticles and their production In many cases it is unavoidable that nanoparticles are released into the environment either during the production processes or during the use of a product made from these particles It is also realized that combustion processes like traffic and power plants release nanoparticles into the atmosphere However it is not known how nanoparticles interact with the human body especially upon inhalation At the same time research activities are devoted to understand how nano sized medicine particles can be used to administer medicines via inhalation In any case it is absolutely necessary to know how the nanoparticles interfere with the inhalation system how they deposit and affect on the human system Three main themes are discussed Nanoparticle sources and production Nanoparticle inhalation and deposition Toxicological and medical consequences of nanoparticles Each theme is covered comprehensively starting at nano quantum effects up to technical and medical applications such as measuring equipment and inhalation instrumentation This book brings together all sub disciplines in the field related to aerosol nanoparticles Each chapter is written by a world expert giving the state of the art information and challenging open questions The last chapter summarizes in an interdisciplinary way what is already known and what still is ahead of us

Mucosal Delivery of Drugs and Biologics in Nanoparticles Pavan Muttli, Nitesh K. Kunda, 2020-03-18. Nanotechnology has revolutionized the approach to designing and developing novel drug delivery systems. The last two decades have seen a great interest in the use of nanotechnology to offer efficient ways of delivering new and existing drugs and macromolecules. The focus of this book is the application of nanotechnology to deliver drugs and biological agents by the mucosal routes of administration, i.e. nasal, pulmonary, buccal and oral routes. It provides an overview of nanotechnology in drug delivery with a description of different types of nanoparticles, methods of preparation and characterization and functionalization for site specific drug delivery. The emphasis is on the use of nanoparticles in treating various cancers and infectious diseases. It broadens the use of nanoparticles by including biologics including vaccines and immunotherapies apart from drugs and acknowledges the concerns around the potential toxicity of nanoparticles to the host. Several chapters will discuss the biodistribution of these nanoparticles when mucosal routes of administration are employed. Further, the interaction of nanoparticles with the host's immune cells is discussed. Moreover, it reviews the regulatory aspects of nanotechnology in product development, especially when delivered by the mucosal route of administration. Lastly, it discusses the challenges and opportunities to manufacture nanoparticles on an industrial scale. This book is the first of its kind to focus on the design, development and delivery of nanoparticles when administered by different mucosal routes.
