Fabian Ventilator User Manual:

Manual of Neonatal Respiratory Care Steven M. Donn, Mark C. Mammel, Anton H.L.C. van Kaam, 2022-05-09 Respiratory care is the largest overall component of neonatal intensive care and the fifth edition of the *Manual of Neonatal Respiratory Care* is the leading bedside guide for all aspects of respiratory care in the neonatal intensive care unit. Its easy-to-read outline format is simple yet comprehensive and covers all aspects of lung disease in the newborn infant including embryology, principles of mechanical ventilation, procedures and techniques, monitoring devices, adjunctive therapies, management of respiratory illness, complications, outcomes, and related issues. The latest edition includes fully revised and updated information, coverage on new equipment and devices, and an expanded authorship to enhance its international appeal. The new edition also features two new co-editors, Dr. Mark Mammel and Dr. Anton Van Kaam, internationally recognized experts in the field who bring a fresh perspective to the manual. Divided into sixteen sections, the book begins with a section on lung development and maldevelopment, specifically covering the development of the respiratory system, malformations, deformations, disorders of the neonatal airway, and developmental lung anomalies. The second section reviews the principles of mechanical ventilation, with coverage on such topics as spontaneous breathing, oxygen therapy, oxygen toxicity, pulmonary mechanics, and ventilator parameters. The third section of the manual outlines procedures and techniques, including neonatal resuscitation, laryngoscopy, and endotracheal intubation and tracheostomy. The following section dives into the monitoring of the ventilated patient, specifically focusing on continuous monitoring techniques, clinical controversies in pulse oximetry and echocardiography. The next section spotlights noninvasive ventilatory techniques, such as nasal interfaces, humidified high flow nasal cannula therapy, and sustained inflation. The sixth section of the manual focuses on ventilatory modes and modalities, with coverage on intermittent mandatory ventilation, pressure support ventilation, and pressure control ventilation. The following section segues into high frequency ventilation, reviewing general concepts, high frequency jet ventilation, and high frequency oscillatory ventilation. The eighth section centers around commonly used neonatal ventilators, such as the Draeger VN500 ventilator, the AVEA ventilator, and the Twinstream ventilator. The ninth section reviews adjunctive therapies, including hemodynamic support, nutritional support, the use of sedation and analgesia, inhaled nitric oxide therapy, and ECMO. The tenth section shifts gears to spotlight the management of common neonatal respiratory diseases, with chapters on mechanisms of respiratory failure, tissue hypoxia, respiratory distress syndrome, persistent pulmonary hypertension, and pulmonary hypoplasia/agensis, among others. Section eleven reviews the etiology, pathogenesis, and management of bronchopulmonary dysplasia, as well as the long-term outcome of newborns with this chronic lung disease. The next section presents complications associated with mechanical ventilation, such as thoracic air leaks, neonatal pulmonary hemorrhage, and neurologic complications. The following two sections spotlight ethical, legal, and other considerations, among them nursing care of the ventilated infant, long-term ventilator dependency, home ventilation, and withdrawal of ventilatory

support and medical liability and risk management The fifteenth section focuses on research and literature with coverage on interpreting medical literature data collection and assessment of respiratory outcomes and contemporary classics in neonatal respiratory care The final section presents ventilatory case studies The text also features over 300 high yield radiographic images figures tables and algorithms Handbook of Burns Volume 1 Marc G. Jeschke,Lars-Peter Kamolz,Folke

Sjöberg,Steven E. Wolf,2012-08-23 This volume covers the entire spectrum of acute burn treatment Individual chapters deal with basic aspects of different burn mechanisms as well as the acute care of burn patients Pre hospital management critical care and basic concepts of burn surgery related to the acute phase as well as the use of skin and skin substitutes in early stages of therapy are addressed in this volume Chapters on supportive therapies such as optimizing nutrition and fluid homeostasis infection control and treatment respiratory support and pain management complete the comprehensive approach to the patient in this early stage of treatment while chapters on epidemiology prevention and disaster management enable the reader to evaluate the given information in a broader context
