Grid Enabled Remote Instrumentation Franco Davoli, Norbert Meyer, Roberto Pugliese, Sandro Zappatore, 2008-10-10 Grid architectures which are viewed as tools for the integration of distributed resources play a significant role as managers of computational resources but also as aggregators of measurement instrumentation and pervasive large scale data acquisition platforms The functionality of a grid architecture allows managing maintaining and exploiting heterogeneous instrumentation and acquisition devices in a unified way by providing standardized interfaces and common work environments to their users This result is achieved through the properties of isolation from the physical

network and from the peculiarities of the instrumentation granted by standard middleware together with secure and flexible mechanisms which seek access and aggregate distributed resources This book focuses on a number of aspects related to the effective exploitation of remote instrumentation on the grid These include middleware architecture high speed networking in support of grid applications wireless grid for acquisition devices and sensor networks quality of service provisioning for real time control and measurement instrumentation Code of Federal Regulations ,1988 Special edition of the Federal Register containing a codification of documents of general applicability and future effect with ancillaries **Integration of Remote Sensed Data in Geographic Information Systems for Processing of Global Resource Information** ,1985 **Machine Learning Techniques Applied to Geoscience Information System and Remote Sensing** Hyung-Sup Jung, Saro Lee, 2019-09-03 As computer and space technologies have been developed geoscience information systems GIS and remote sensing RS technologies which deal with the geospatial information have been rapidly maturing Moreover over the last few decades machine learning techniques including artificial neural network ANN deep learning decision tree and support vector machine SVM have been successfully applied to geospatial science and engineering research fields The machine learning techniques have been widely applied to GIS and RS research fields and have recently produced valuable results in the areas of geoscience environment natural hazards and natural resources This book is a collection representing novel contributions detailing machine learning techniques as applied to geoscience information systems and remote sensing Electrical World ,1909 Computerworld ,1972-12-13 For more than 40 years Computerworld has been the leading source of technology news and information for IT influencers worldwide Computerworld's award winning Web site Computerworld.com twice monthly publication focused conference series and custom research form the hub of the world's largest global IT media network **Essential Circuits Reference Guide** John Markus, Charles D.
