David Franklin

Gravity And Acceleration Ii Physical Science If8767:

An Introduction to Gravity Modification Benjamin T. Solomon, 2012 An Introduction to Gravity Modification Second Edition is the result of a 12 year 1999 2011 study into the theoretical and technological feasibility of gravity modification that presents the new physics of forces by replacing relativistic quantum and string theories with process models Gravity electromagnetism and mechanical forces are unified by Ni fields and obey a common equation $g \tau c$ DEGREES2 Gravity modification is defined as the modification of the strength and direction of the gravitational acceleration without the use of mass as the primary source of this modification in local space time It consists of field modulation and field vectoring Field modulation is the ability to attenuate or amplify a force field Field vectoring is the ability to change the direction of this force field This book reaches out to a wider audience and not just to the theoretical physicist to engineers and technologist who have the funding to experiment just as Arno Penzias and Robert Woodrow Wilson experimented with the Holmdel Horn Antenna and discovered the microwave background radiation The mathematics is easier than that taught in theoretical physics and therefore accessible to a wider audience such as these engineers and technologists **The New Gravity** Kenneth G. Salem, 1994 **Acceleration and Gravity**, 1968 The Riddle of Gravitation Peter Gabriel Bergmann, 1992-01-01 Nonmathematical introduction to conceptual foundations of both Newton's and Einstein's theories of gravity features updated material on gravity waves singularities and other current topics 88 illustrations 1968 edition *Gravitation and Relativity* M. G. Bowler, 2013-10-22 Gravitation and Relativity generalizes Isaac Newton's theory of gravitation using the elementary tools of Albert Einstein's special relativity Topics covered include gravitational waves martian electrodynamics relativistic gravitational fields and gravitational forces the distortion of reference frames and the precession of the perihelion of Mercury Black holes and the geometry of spacetime also receive consideration This book is comprised of 10 chapters the first of which briefly reviews special relativity with the emphasis on the Lorentz covariance of the equations of physics This topic is then followed by a short discussion on accelerations in the framework of special relativity Two problems related to the gravitational deflection of light and how to detect a gravitational acceleration by observations within a freely falling laboratory are discussed in this book The chapters that follow focus on the Eötvös-Dicke experiments that established the identity of inertial and gravitational mass the equations of electrodynamics and electrostatics force laws and equations of motion and the precession of the perihelion of Mercury The reader is also introduced to the nature of gravitational radiation its generation and detection and the relation between the metric tensor and gravitational potentials The book concludes with a chapter on black holes and how they may manifest themselves to the astronomer This monograph will appeal not only to professional physicists but also to undergraduates in physics who want to know a great deal about gravitation and relativity *The Machinery of Gravity* David Franklin, 2021-07-30 Describes the machinery of gravity based on the idea that all matter is expanding forever Derives equations showing that the intuitive notion that this idea can not be correct because objects of

different densities would change sizes is wrong. Instead, because nothing can go faster than light, speed objects regardless of densities or geometry converge in sizes such that the ratio of all sizes remain almost time invariant. However, there remains a very small difference in the ratios that can be measured under some conditions and shows up in certain long distance measurements. One example being the three Pioneer 10/11 anomalous accelerations and the apparent but unexplained expansion of the earth. The idea is developed and then applied to six problems in physics: bending of starlight, advance of the perihelion of Mercury, behavior of spiral galaxies, expansion of the earth, anomalous acceleration terms for Pioneer 10/11, and acceleration of universe expansion, showing very nice explanations and solutions matching measurement results with in some cases simpler solutions than in the literature. Universal Properties of Acceleration Barry LeBost, 2011-10-20
