Testing Regimes, Accountabilities and Education Policy Bob Lingard, Goli Rezai-Rashti, Wayne Martino, 2017-10-02

Around the globe various kinds of testing including high stakes national census testing have become meta policies steering educational systems in particular directions and having great effects on schools and on teacher practices as well as upon student learning and curricula There has also been a complementary global aspect to this with the OECD s PISA and IEA s TIMSS and PIRLS which have had impacts on national education systems and their policy frameworks While there has been a globalized educational policy discourse that suggests that high stakes standardised testing will drive up standards and enhance the quality of a nation s human capital and thus their international economic competitiveness this discourse still manifests itself in specific vernacular path dependent ways in different nations High stakes testing and its effects can also be seen as part of the phenomenon of the datafication of the world and policy as numbers linked to other reforms of the state including new public management network governance and top down and test based modes of accountability This edited collection provides theoretically and empirically informed analyses of these developments This book was originally published as a special issue of the Journal of Education Policy

Twenty-first Century Schools Gerard MacDonald, David Hursh, 2006-01-01 Contemporary school systems are not working well Educational solutions abound but the problems remain This is because our school systems are not primarily concerned with education Their driving forces are political and economic Any systemic solution to schooling s current difficulties will start with politics not in any conventional sense with education Twenty first Century Schools traces the extension of political control over Britain s school system and through US case studies looks at alternative methods of organisation The authors argue that Anglo American school systems provide a good education for a small minority and to the majority offer inadequate schooling Though this has always been inequitable it may in the past have been economically efficient at least from the viewpoint of the state If that was once true for mercantile and industrial economies it is not true now The knowledge economies toward which the UK and US are moving demand a continuing ability to learn and to innovate right across the workforce Our time honoured tradition of anachronistic curricula didactically taught does not develop these qualities For those reasons the current Anglo American drive to entrench unequal educational opportunity is at once economically politically and socially misconceived From these premises Twenty first Century Schools goes on to outline the political and educational changes needed to shape school systems which are socially and economically adapted to the new century
