Answer Key

SECTION 1. ATOMS, IONS, AND MOLECULES

1. An element is a certain type of atom.
2. Sketch should resemble one of the illustrations in Figure 1.2 in Section 1. Nucleus should be in the center with protons and neutrons. Electrons should be labeled in a ring surrounding the nucleus.
3. A compound is composed of atoms of different elements.
4. an atom that has gained or lost one or more electrons
5. the number of protons no longer equals the number of electrons
6. Sketch should resemble the first illustration in Figure 1.3, with one atom losing an electron (becoming a positive ion) and the other accepting that electron (becoming a negative ion).
7. A bond that forms between two atoms that share a pair of electrons.
8. the number of electron pairs that it needs to share to fill its outer energy level
9. molecule
10. compound
11. element
12. ion
13. Ionic bonds form between oppositely-charged ions; covalent bonds form when atoms share a pair of electrons.

SECTION 2. PROPERTIES OF WATER

1. a molecule with a slightly positively charged region and a slightly negatively charged region
2. The oxygen nucleus pulls the electrons in the molecule more strongly than the hydrogen atoms. The hydrogen atoms have a slight positive charge and the oxygen atom has a slight negative charge.
3. an attraction between a slightly positive hydrogen and a slightly negative atom
4. between the slightly positive hydrogen atom of one water molecule and the

slightly negative oxygen atom of another water molecule

5. A large amount of energy is needed to produce an increase in water temperature; water resists changes in temperature.

Huetinck,Sara N. Munshin,2008 This third edition of Teaching Mathematics for the 21st Century continues to help teachers
let the secret out to open up to their students the wonderful discoveries and challenges of the pattern making and problem
solving aspects of a fascinating subject mathematics The rationale remains the same to enable prospective and current
teachers to access and use tools and strategies to effectively teach mathematics to contemporary students Changing
demographics knowledge of how people learn and technology all impact the way we educate our young people This edition
incorporates lessons and strategies from programs that have proven success in many types of classrooms Many of these
examples help students connect mathematics to real life situations and communicate their understanding of the underlying
concepts Although technology is constantly being upgraded ways to increase student motivation through its application
remains a goal For example since applets can enhance a lesson whether the teacher uses a computer projector a smart board
or has students work individually on computers we have identified several sources of mathematics applets that can be
correlated to various lessons Research citations and summaries have been updated to reflect current information on teaching
and learning For future teachers *Computational Experiment Approach to Advanced Secondary Mathematics Curriculum*
Sergei Abramovich,2014-05-08 This book promotes the experimental mathematics approach in the context of secondary
mathematics curriculum by exploring mathematical models depending on parameters that were typically considered
advanced in the pre digital education era This approach by drawing on the power of computers to perform numerical
computations and graphical constructions stimulates formal learning of mathematics through making sense of a
computational experiment It allows one in the spirit of Freudenthal to bridge serious mathematical content and
contemporary teaching practice In other words the notion of teaching experiment can be extended to include a true
mathematical experiment When used appropriately the approach creates conditions for collateral learning in the spirit of
Dewey to occur including the development of skills important for engineering applications of mathematics In the context of a
mathematics teacher education program the book addresses a call for the preparation of teachers capable of utilizing modern
technology tools for the modeling based teaching of mathematics with a focus on methods conducive to the improvement of

the whole STEM education at the secondary level By the same token using the book s pedagogy and its mathematical content in a pre college classroom can assist teachers in introducing students to the ideas that develop the foundation of engineering profession **Distance Education and Distributed Learning** Gene V Glass,Charalambos Vrasidas,2002-12-01
