Risque d'inondation et aménagement

durable des territoires Helga-Jane Scarwell,Richard Laganier,2004 Présente une vision territoriale du risque liée aux inondations L'approche des aspects hydrologiques et hydrauliques des inondations est ici croisée avec la perception des réalités sociales et des questions réglementaires Analyse les modalités de la prévention du risque et la répartition des responsabilités entre Etat et collectivités territoriales

Facing Hydrometeorological Extreme Events Isabelle La Jeunesse,Corinne Larrue,2019-11-04 Provides an understanding of the relationship between social ecological systems and multilevel governance so that readers can properly deal with hydrometeorological extreme events and hazards Based on field investigations from EU research projects this book is the first to devote itself to scientific and policy related knowledge concerning climate change induced extreme events It depicts national and international strategies as well as tools used to improve multilevel governance for the management of hydrometeorological risks It also demonstrates how these strategies play out over different scales of the decision making processes Facing Hydrometeorological Extreme Events A Governance Issue offers comprehensive coverage of such events as floods droughts coastal storms and wind storms It showcases real life success stories of multilevel governance and highlights the individuals involved and the resources mobilized in the decision making processes The book starts by presenting a synthesis of hydrometeorological extreme events and their impacts on society It then demonstrates how societies are organizing themselves to face these extreme events focusing on the strategies of integration of risk management in governance and public policy In addition it includes the results of several EU funded projects such as CLIMB STARFLOOD and INTERREG IVB project DROP The first book dedicated to hydrometeorological extreme events governance based on field investigations from EU research projects Offers a multi hazards approach mixing policy governance and field investigations main outputs Features the results of EU funded projects addressing hydrometeorological extreme events Part of the Hydrometeorological Extreme Events series Facing Hydrometeorological Extreme Events is an ideal book for upper graduate students postgraduates researchers scientists and policy makers working in the field

Floods Freddy Vinet,2017-11-22 The management of flood risk seems to be facing a daunting paradox Despite increasingly effective risk knowledge tools and the efforts of international institutions to place risk reduction at the top of the agenda the cost of disasters continues to increase It is also increasingly difficult to avoid the urbanization or development of potential flood zones The fundamental issue involves determining the conditions necessary for efficient prevention by focusing on adaptability to risk which implies coping with the risk of flooding rather than directly fighting against it or simply

ignoring it This second volume of the Floods series of books explores existing policies and tools which mitigate the impact of flooding the construction of protective structures the reduction of vulnerability land use planning the improvement of crisis management etc The closing chapters focus on the question of adaptation through post flood reconstruction integrating disaster risk reduction measures e g through resilient urbanism Presents the state of the art surrounding flood issues from the description of the phenomena to the management of risk dikes dams reducing vulnerability and management of crisis Written by specialists but accessible to mainstream scientists Exposes knowledge methodologies scientific locks and the prospects of each discipline on the theme of floods

Face aux risques d'inondation Mathilde Gralepois,2024-12-17 L'intégration des inondations dans les politiques locales d'urbanisme fait l'objet de nombreux

blocages analysés par Mathilde Gralepois travers l'étude des rapports de force entre les services administratifs de l'état et ceux des collectivités locales La possibilité d'urbaniser dans les zones inondables illustre la prépondérance des outils techniques sur le portage politique et la réflexibilité démocratique Pourtant plus les débats sur les inondations sont restreints aux décisions techniques plus la sectorisation entre les politiques publiques se renforce au détriment d'une prévention efficace L'essor des politiques de développement durable permettra-t-il de concilier aménagement des territoires et prévention des risques

Inondations 2 Freddy Vinet, 2018-06-01 La gestion du risque inondation est paradoxale malgré des outils de connaissance du risque de plus en plus performants et malgré les efforts des institutions internationales pour mettre la réduction du risque à l'agenda le coût des catastrophes ne cesse de grimper d'autant qu'il est de plus en plus difficile de ne pas urbaniser ou aménager les territoires inondables Déterminer les conditions d'une prévention efficace en se focalisant sur l'adaptation au risque est l'une des problématiques fondamentales dont traite cet ouvrage Ceci implique la nécessité de composer avec l'inondabilité et non de lutter frontalement ou de l'ignorer C'est dans cette optique qu'Inondations 2 la gestion du risque présente les politiques et outils existants pour limiter les impacts des inondations ouvrages de protection réduction de la vulnérabilité des territoires amélioration de la gestion de crise etc Plusieurs chapitres analysent la question de l'adaptation par des reconstructions post inondations introduction de mesures préventives ou par un urbanisme résilient

Les inondations à Dakar. CISSE Oumar, 2018-12-28 Fruit d'une recherche pluridisciplinaire cet ouvrage porte sur la question des inondations devenue un défi majeur sur le continent africain Dans les grandes métropoles en raison d'une urbanisation effrénée et d'une gestion inadaptée du foncier les populations notamment des communes s'installent en zones inondables Dakar et sa périphérie en sont une parfaite illustration De plus l'extension périurbaine de l'habitat se réalise souvent au détriment des zones agricoles Ce livre montre combien les inondations récurrentes observées dans la banlieue de Dakar qui impactent les familles et les infrastructures ne résultent pas de pluies exceptionnelles même si ces dernières demeurent plus importantes que lors des décennies précédentes Il est plutôt mis l'accent sur les lacunes et les défaillances des politiques publiques d'aménagement et sur l'intérêt particulier des études

spatiales dans l'analyse et la compréhension des inondations. Elles révèlent surtout que les communautés et les ménages s'adaptent aux contraintes de leur environnement en déployant des stratégies particulières avant, pendant et après les pluies pour protéger leurs biens et les infrastructures, notamment les habitations. Il est ainsi réaffirmé fortement que les inondations ne sont en rien une fatalité. C'est ce qu'illustrent les données de première main utiles pour les chercheurs, les aménagés et les pouvoirs publics réunies ici suite des études menées à Yeumbeul Nord Djiddah, Thiaroye Kao, Pikine et Médina Gounass Gu diawaye. Il est donné ici un éclairage novateur sur une multitude d'acteurs aux rôles mal définis. Il est enfin proposée une étude des écosystèmes humides et de leur apport potentiel dans la prévention et la gestion des inondations. Cet ouvrage offre des connaissances approfondies des questionnements mais aussi des pistes de décisions et d'actions pour tous ceux qui des degrés divers participent à la recherche de solutions durables à la question des inondations et en conséquence pour la construction de l'avenir du Sénégal. Mambretti, 2021-08-04. Papers presented at the 11th International Conference on Sustainable Water Resources Management are included in this volume. These research works highlight recent technological and scientific developments associated with the management of surface and sub-surface water resources and as well as river basin management methodologies. Water is essential for sustaining life on our planet and its uneven distribution is a source of permanent conflict. The growth of the

human population combined with the irregularity in precipitation and water availability may restrict even further the access to water in certain regions of the world This problem is made more severe by anthropogenic activities that affect its quality River Basin Management includes all aspects of Hydrology Ecology Environmental Management Flood Plains and Wetlands Riverine systems are coming under increasing pressure due to anthropological and natural causes Prominent amongst the problems affecting them is water scarcity and quality which requires the development of improved methods for better river management This volume features research from professionals involved in sustainable water resources management and provides an insight into the state of the art in the current technology techniques and solutions in that field as they have been developed and applied in different countries
