The over-harvesting of traditional indigenous medicinal plants contributes to the decline of biodiversity in South Africa.

The African potato (*Hypoxis hemerocallidea*) is a natural resource that is widely used as a traditional medicine in South Africa. The use of the plant escalated at the onset of the HIV/AIDS pandemic because it was popularly believed that it cures AIDS. Extensive medical research has shown that it is not a cure for AIDS, although it may have other medicinal properties.

Field research, on the rate at which it is harvested, was done in YaaTula Natal. The results show that more than 40 000 corms are widely harvested every year.
