

The screenshot displays the Crystal Reports Formula Editor interface. The title bar reads "Formula Workshop - Formula Editor - weekday". The top toolbar includes icons for "Save and close", "Save", and various editing tools. Below the toolbar, there are tabs for "Crystal Syntax" and "Exceptions For Nulls". The left sidebar shows a tree view of function categories: "Report Custom Functions", "Repository Custom Functions", "Formula Fields", "weekday" (selected), "SQL Expression Fields", "Selection Formulas", and "Formatting Formulas". The main area is divided into two panes. The left pane, titled "ListCustomer_", contains a list of fields: "Date Acquired", "Last Name", "Title", "First Name", "Company", "Department", "Email", and "Sales/Year". The right pane, titled "Date and Time", contains a list of functions: "CurrentDate", "CurrentDateTime", "CurrentTime", "Date", "DateAdd (interval)", "DateDiff", "DatePart", and "DateSerial (year)". A red circle highlights the "Date and Time" function category. The formula editor at the bottom contains the text: `weekdayname (weekday ((ListCustomer_.Date Acquired)))`.

Crystal Reports .NET Programming Brian Bischof, 2004 I wrote this book from the perspective of a programmer wanting to learn how to integrate reports within a .NET application I ve been working with Crystal Reports since Visual Basic 3 and it s always been difficult to find technical information on report writing I spent a year and a half researching what .NET programmers need to successfully create implement and deploy a Crystal Reports application I even put the book on the internet for everyone to read for free all of last year This generated an incredible number of emails from programmers telling me what they liked disliked and what was missing from the book I learned that there are two distinct types of .NET programmers using Crystal Reports The first type of programmer doesn t have much experience with Crystal Reports and wants a series of tutorials to help them build reports from scratch For this programmer I wrote 13 chapters which teach you everything about adding reports to ASP .NET and Windows applications It starts with the basics of building reports to adding charts crosstab reports sorting and grouping subreports and using the formula editor with Basic syntax and Crystal syntax The second type of programmer has been using Crystal Reports for years and is mostly concerned with how to do technical runtime customization of reports For this programmer I researched and diagrammed the undocumented report object models I included dozens of examples in both VB .NET and C# to show you how to modify reports manipulate different data sources XML ADO .NET ODBC OLE DB stored procedures with parameters modify formulas and report parameters and integrate .NET

with the RAS and RDC The dozens of emails I received when the book was online were instrumental for doing a major revision of many chapters before publishing the book in hardcopy format Since releasing the book I continue to receive more emails from people They regret that the free book isn't online anymore but understand that it couldn't last forever and that the hardcopy version is even better I hope you like it and that it helps you achieve your reporting goals September 2004 Update Due to high demand I did a second printing of the book I took advantage of this opportunity to go through the book and remove all grammatical errors The content is the same but the typos have been corrected *Sams Teach Yourself Crystal Reports 9 in 24 Hours* Joe Estes, 2002 This book is a complete reference for using and developing with Crystal Reports and teaches all of the basics as well as teach how to integrate Crystal Reports with key development languages and the use of web reporting It gives readers a complete reference book that has been unavailable in the marketplace to date
