handbook is to describe and to derive the analytic solutions of the equations of satellite motion perturbed by extraterrestrial and geopotential disturbances of the second order The equations of satellite motion perturbed by extraterrestrial disturbances are solved by means of discretization and approximated potential function as well as Gaussian equations The equations perturbed by geopotential disturbances are solved by symbolic mathematical operations The traditional problem of singularity in the solutions is solved by so called singularity free orbit theory Simplified disturbed equations of motion are proposed to simplify the solutions Applications of the theory for analytic orbit determination are also discussed Indeed this is the first book since the satellite era which describes systematically the orbit theory with analytical solutions with respect to all of extraterrestrial and geopotential disturbances of the second order and the solutions are free of singularity Based on such a theory the algorithms of orbit determination can be renewed deeper insight into the physics of disturbances becomes possible the way to a variety of new applications and refinements is opened My primary knowledge of the orbit theory came from my education of mathematics while studying physics and theoretical mechanics 1981 My first practical experience with orbit came from the research activity at the Technical University TU Berlin on orbit corrections of the satellite altimetry data 1988 1992 The extensive experience on orbit came from the GPS Galileo software development for orbit determination and geopotential mapping at the GFZ 2001 2004
