Numerical Methods for Roots of Polynomials - Part II J.M. McNamee, V.Y. Pan, 2013-07-19 Whereas Newton's method involves only the first derivative methods discussed in this chapter involve the second or higher The classical methods of this type such as Halley's Euler's Hansen and Patrick's Ostrowski's Cauchy's and Chebyshev's are all third order with three evaluations so are slightly more efficient than Newton's method Convergence of some of these methods is discussed as well as composite variations some of which have fairly high efficiency We describe special methods for multiple roots simultaneous or interval methods and acceleration techniques We treat Laguerre's method which is known to be globally convergent for all real roots The Cluster Adapted Method is useful for multiple or near multiple roots Several composite methods are discussed as well as methods using determinants or various types of interpolation and Schroeder's method
