Electrical World ,1909 *Revenge and Social Conflict* Kit R. Christensen,2016-09-15 Revenge has been a subject of concern in most intellectual traditions throughout history and even when social norms regard it as permissible or

even obligatory it is commonly recognised as being more counterproductive than beneficial In this book Kit R Christensen explores this provocative issue offering an in depth account of both the nature of revenge and the causes and consequences of the desire for this kind of retaliatory violence He then develops a version of eudaimonistic consequentialism to argue that vengeance is never morally justified and applies this to cases of intergroup violence where the lust for revenge against a vilified Them is easily incited and often exploited His study will interest a wide range of readers in moral philosophy as well as social philosophers legal theorists and social behavioural scientists Frenemies Ken Auletta, 2019-06-04 An intimate and profound reckoning with the changes buffeting the 2 trillion global advertising and marketing business from the perspective of its most powerful players by the bestselling author of Googled Advertising and marketing touches on every corner of our lives and the industry is the invisible fuel powering almost all media Complain about it though we might without it the world would be a darker place But of all the industries wracked by change in the digital age few have been turned on their heads as dramatically as this one Mad Men are turning into Math Men and women though too few an instinctual art is transforming into a science and we are a long way from the days of Don Draper Frenemies is Ken Auletta s reckoning with an industry under existential assault He enters the rooms of the ad world s most important players meeting the old guard as well as new powers and power brokers investigating their perspectives It s essential reading not simply because of what it reveals about this world but because of the potential consequences the survival of media as we know it depends on the money generated by advertising and marketing revenue that is in peril in the face of technological changes and the fraying trust between the industry s key players *Technological Innovation in Legacy Sectors* William B. Bonvillian, Charles Weiss, 2015-08-18 The American economy faces two deep problems expanding innovation and raising the rate of quality job creation Both have roots in a neglected problem the resistance of Legacy economic sectors to innovation While the U S has focused its policies on breakthrough innovations to create new economic frontiers like information technology and biotechnology most of its economy is locked into Legacy sectors defended by technological economic political social paradigms that block competition from disruptive innovations that could challenge their models Americans like to build technology covered wagons and take them out west to open new innovation frontiers we don t head our wagons back east to bring innovation to our Legacy sectors By failing to do so the economy misses a major opportunity for innovation which is the bedrock of U S competitiveness and its standard of living Technological Innovation in Legacy Sectors uses a new unifying conceptual framework to identify the shared features underlying structural obstacles to innovation in major Legacy sectors energy air and auto transport the electric power grid buildings manufacturing agriculture health care delivery and higher education and develops approaches to understand and transform them It finds both strengths and obstacles to innovation in the national innovation environments a new concept that combines the innovation system and the broader innovation context for a group of Asian and European economies Manufacturing is a major Legacy sector that presents a particular challenge because it is a

critical stage in the innovation process By increasingly offshoring production the U S is losing important parts of its innovation capacity Innovate here produce here where the U S took all the gains of its strong innovation system at every stage is being replaced by innovate here produce there which threatens to lead to produce there innovate there To bring innovation to Legacy sectors authors William Bonvillian and Charles Weiss recommend that policymakers focus on all stages of innovation from research through implementation They should fill institutional gaps in the innovation system and take measures to address structural obstacles to needed disruptive innovations In the specific case of advanced manufacturing the production ecosystem can be recreated to reverse jobless innovation and add manufacturing led innovation to the U S s still strong research oriented innovation system
