Gastrointestinal Emergencies Autumn Graham, David J. Carlberg, 2019-02-05 This book answers key questions asked by emergency clinicians faced with complex gastrointestinal and abdominal pain presentations. Instead of a traditional format that includes epidemiology, pathophysiology, diagnosis and treatment options, this book takes an approach that mirrors the way clinicians interact with patients by asking and answering specific clinical care questions. The book is organized into sections by presentation: gastrointestinal bleeding, for example, each of which contains chapters on specific questions such as: What is the best clinical risk score for low risk GIB patients? Each clinical question comes with a detailed evidence based response and a summary that gives best practices, recommendations and references. Additionally, at the end of each section is a chapter titled Expert Corner which asks the same clinical questions to a surgical or gastrointestinal specialist and includes key pearls these experts have for emergency medicine practitioners. **Gastrointestinal Emergencies: Evidence Based Answers to Key Clinical Questions** is an essential guide for emergency medicine physicians, residents and medical students who want to review and improve their care of acute gastrointestinal emergencies.

Advocacy in English Language Teaching and Learning Heather A. Linville, James Whiting, 2019-01-10. Appropriate for those new to the topic and established scholars, this holistic text examines the nexus of advocacy and English language teaching, beginning with theories of advocacy, covering constraints and challenges in practice and offering a range of hands-on perspectives in different contexts and with different populations. Bringing together wide ranging and diverse viewpoints in TESOL, this volume examines the role of advocacy through a social justice lens in a range of contexts including K-12 classrooms and schools, adult and higher education settings, families and communities, and teacher education programs and professional organizations. *Advocacy in English Language Teaching and Learning* offers readers a deeper understanding of what advocacy is and can be and gives teacher candidates and educators the tools to advocate for their students, their families and communities, and their profession.

Strawberry Amjad M. Husaini, Davide Neri, 2016-10-17. Methods of strawberry cultivation have undergone extensive modification and this book provides an up to date, broad and balanced scientific review of current research and emerging challenges. Subjects covered range from plant propagation, architecture, genetic resources, breeding, abiotic stresses and climate change to evolving diseases and their control. These topics are examined in three sections: 1. Genetics, Breeding and Omics, covering genetic resources, breeding, metabolomics, transcriptomics and genetic transformation of strawberry; 2. Cultivation Systems and Propagation, discussing plant architecture, replanting problems and plant propagation techniques; 3. Disease and Stress Management, dealing with traditional and emerging fungal diseases, their diagnosis and modern biocontrol strategies and biotechnological interventions for dealing with the challenges of climate change. *Strawberry: Growth, Development and Diseases* is written by an international team of specialists, using figures and tables to make the subject comprehensible and informative. It is an essential resource for academics and industry workers involved in strawberry research and development and all those interested in the commercial cultivation of strawberries.

Reading Actively in Middle Grade Science Don K. Philpot, 2020-09-15. Middle grade students can learn a great deal about themselves and their world by reading informative texts in science courses. These texts will focus on important topics in earth science, life science and physical science and shape students' understandings about scientific inquiry, science related processes and phenomenon, engineering and design and technological innovations. But reading is a

complex act and most students need specific reading related support to understand assigned texts in middle grade science courses This book focuses on the cyclical nature of reading the actions proficient readers engage in to understand science textbooks and other informational texts and the instructional support that teachers can provide to enhance middle grade students learning of science content through reading Three associated questions will be addressed in this book What actions do proficient readers engage in to understand assigned course texts What do these actions entail and how do they relate to each other What teacher mediated practices best support middle grade students development as proficient readers and enhance their learning of course content through reading

Low Grade Heat Driven Multi-Effect Distillation and Desalination Hui Tong Chua,Bijan Rahimi,2017-03-01 Low Grade Heat Driven Multi effect Distillation and Desalination describes the development of advanced multi effect evaporation technologies that are driven by low grade sensible heat including process waste heat in refineries heat rejection from diesel generators or microturbines and solar and geothermal energy The technologies discussed can be applied to desalination in remote areas purifying produced water in oil and gas industries and to re concentrate process liquor in refineries This book is ideal for researchers engineering scientists graduate students and industrial practitioners working in the desalination petrochemical and mineral refining sectors helping them further understand the technologies and opportunities that relate to their respective industries For researchers and graduate students the core enabling ideas in the book will provide insights and open up new horizons in thermal engineering Focuses on advanced yet practical distillation technologies using low grade sensible heat Explains the new design paradigm that must accompany the development of technologies Contains key experimental data that serves to prove the core concepts that underpin the new technologies Covers extensive thermo economic analyses of the technologies the price point for adoption capital cost comparison with existing technologies operating costs and net present values

The Optimal Homotopy Asymptotic Method Vasile Marinca,Nicolae Herisanu,2015-04-02 This book emphasizes in detail the applicability of the Optimal Homotopy Asymptotic Method to various engineering problems It is a continuation of the book Nonlinear Dynamical Systems in Engineering Some Approximate Approaches published at Springer in 2011 and it contains a great amount of practical models from various fields of engineering such as classical and fluid mechanics thermodynamics nonlinear oscillations electrical machines and so on The main structure of the book consists of 5 chapters The first chapter is introductory while the second chapter is devoted to a short history of the development of homotopy methods including the basic ideas of the Optimal Homotopy Asymptotic Method The last three chapters from Chapter 3 to Chapter 5 are introducing three distinct alternatives of the Optimal Homotopy Asymptotic Method with illustrative applications to nonlinear dynamical systems The third chapter deals with the first alternative of our approach with two iterations Five applications are presented from fluid mechanics and nonlinear oscillations The Chapter 4 presents the Optimal Homotopy Asymptotic Method with a single iteration and solving the linear

equation on the first approximation Here are treated 32 models from different fields of engineering such as fluid mechanics thermodynamics nonlinear damped and undamped oscillations electrical machines and even from physics and biology The last chapter is devoted to the Optimal Homotopy Asymptotic Method with a single iteration but without solving the equation in the first approximation

A Novel SOFC Tri-generation System for Building Applications Theo Elmer, 2016-10-18

The thesis has critically examined both theoretically and experimentally a novel tri generation system concept with encouraging system performance demonstrated The thesis establishes the significant potential of the novel tri generation system in providing effective built environment decarbonisation through decentralised generation strengthening the case for a future hydrogen economy In response to the critical need to decarbonise the built environment alternative methods for more effective energy utilisation need to be explored including tri generation systems The thesis presents the design development and testing of a novel proof of concept tri generation system based on solid oxide fuel cell SOFC and liquid desiccant air conditioning technology to provide electricity heating and cooling to building applications No previous work has been reported on such a system The theme of the work sits within the topics of low carbon and sustainable energy technologies building services and low carbon building applications
