McKenzie, 2018-06-06 This book argues that Lionel Robbins's construction of the economics field's organizing cornerstone scarcity and all that has been derived from it from economists in Robbins's time to today no longer can generate general consent among economists Since Robbins's Essay economists have learned more than Robbins and his cohorts could have imagined about human decision making and about the human brain that is the lynchpin of human decision making This book argues however that behavioral economists and neuroeconomists in pointing to numerous ways people fall short of perfectly rational decisions anomalies biases and downright errors have saved conventional economics from such self contradictions in what could be viewed as a wayward approach This book posits that the human brain is the ultimate scarce resource and that a focus on the brain can bring a new foundation for economics and can save the discipline from hostile criticisms from a variety of non economists many psychologists **Economics of Maritime Business** Shuo Ma, 2020-06-02 This book provides a comprehensive introduction to the economics of the business of maritime transport It provides an economic explanation of four aspects of maritime transport namely the demand the supply the market and the strategy The book first explains why seaborne trade happens and what its development trends are it then analyses the main features of shipping supply and how various shipping markets function the book finally addresses the critical strategic issues of the shipping business The full range of different types of shipping are covered throughout the chapters and cases The book combines the basic principles of maritime transport with the modern shipping business and the latest technological developments particularly in the area of digital disruption The ideas and explanations are supported and evidenced by practical examples and more than 160 tables and figures The questions posed by the book are similar to those that would be asked by the students in their learning process or the professionals in the business environment with the answers concentrating on the reasons for what has happened and will happen in the future rather than merely fact telling or any specific forecast The book is most suited for students of shipping

related disciplines and is also a valuable reference for maritime professionals
