loss are intensifying despite our best efforts to combat them. The key reason for this is that the drivers of these problems are closely linked to the industrialism and consumerism that are promoted by governments and other organizations the world over. This innovative book identifies the key issues that block progress in sustainable development and proposes transdisciplinary solutions. Presenting a review of the epistemology and ethics of this policy field including current policy responses, it examines the ethical and policy implications from a multidisciplinary perspective. The book explains the current limitations of scientific prediction for global environmental issues and develops innovative approaches to respond to these difficulties, drawing out lessons that will make sustainable development policy more democratic, plural, and open. This book will be of great interest to students and researchers in environmental policy, development studies, politics, economics, and sustainable development.

**Resource and Environmental Management** Bruce Mitchell, 2019. In order to optimally manage the environment and natural resources, it is vitally important to recognize that there is much more to consider than just the environment itself and the natural resources it provides. A key consideration is also the interrelationship between natural ecosystems and human involvement and behavior. This interaction is where the field of environmental resource management comes into play: the complex ecological and sociological systems of the natural world intertwined. The purpose of this book is to consider such matters and to help readers develop their own capacities as environmental managers and stewards. Bruce Mitchell's textbook *Resource and Environmental Management* served as the gold standard for many environmental science courses when the first edition published in 1997. Now twenty years later, an updated third edition allows for the inclusion of recent developments. The book covers the basic theories and concepts of environmental resource management and guides students to be able to apply those concepts to practical situations. By covering basic theories and concepts and by using case studies to show how these have been applied, Bruce Mitchell's new edition seeks to ensure that students have competence in both aspects. The text enhances the reader's capacity to conduct practice and research in resource and environmental management.

*Wetlands and Water Resources: Ecological Solutions for the Environment* Guangzhi Sun, Xiaofei Yu, Yuanchun Zou, Guobin Fu, 2023-04-12. Wetlands are usually located in complex landscapes. Multiple ecosystem services delivered by wetlands to human well-being should be considered in broader contexts of wetland functions: water quality, water resource management, and wetland conservation. Natural wetlands are kidneys and sponges of the earth that remove water pollutants and provide hydrological regulation functions vital to the environment. Where the functions of the wetlands are weakened, actions of rehabilitations are needed to revitalize those functions. While worldwide many natural wetlands have disappeared due to climate change and/or human activities, constructed wetlands, which may be seen as artificial kidneys/sponges of the earth, have been increasingly built to replicate the functions of the natural wetlands. This Research Topic aims to collect and present the latest research developments in natural and constructed wetlands in relation to either water resource functions or water quality. Articles published in this Research Topic will showcase new

understandings of water balances and flow patterns vegetation characteristics and pollutant transformations in wetland systems innovative designs and efficiencies of wastewater treatment wetlands and technologies that revitalize the ecosystem functions of natural wetlands These articles are expected to bring benefits to research communities water and wastewater industries and government agencies that deal with wetland water management and conservation High quality Original Research and Review articles in this field are all welcome for submission to this Research Topic Research interests include but are not limited to the following areas 1 Water balances and flow patterns in natural wetland systems 2 The hydrological regulation functions and importance of natural wetlands in their environmental context 3 Vegetation characteristics of natural wetlands and their functional importance in wetland water pollution control 4 Techniques for the rehabilitation of degraded wetlands 5 The role of constructed wetlands in wastewater treatment 6 Innovative designs and efficiencies of wastewater treatment wetlands 7 The modeling of hydrological and or pollutant dynamics in wetland systems 8 The ecohydrology of wetlands 9 The role of wetlands in the global carbon cycle 10 Impacts of climate change and human activities on wetland hydrology and water resources Recognizing that hydrological and biogeochemical processes are basically coupled in wetlands and their landscapes manuscripts that report their interactions are particularly welcome
