

Enzymes and Cellular Regulation

What are the biochemical regulatory mechanisms which regulate metabolism?

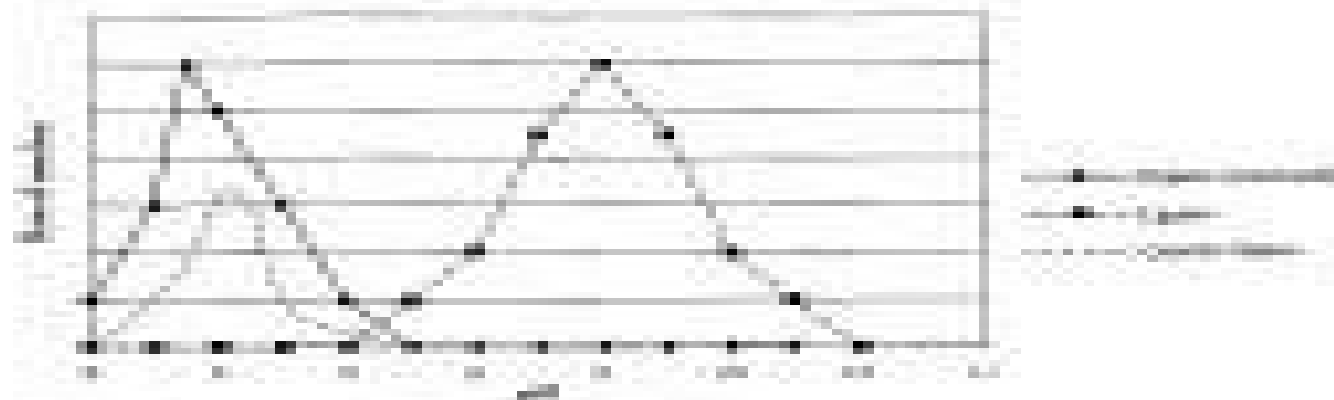

What?

Digestive enzymes are protein based biological catalysts that play a major role in food flow. They help convert substances in foods, react with other foods, and are responsible for making new foods that are different from foods. Enzymes function for one week with catalase. There are many kinds of food enzymes, called as food enzymes. They are used to break down food into small molecules of food molecules. In this section we will look at the general properties for two different enzymes. The digestive enzyme, lipase, is used to break down lipids in the small intestine.
