Abstract
Regulation of plant growth and development is controlled by a complex network of signaling pathways. The plant hormone auxin plays a central role in this process. Auxin signaling is initiated by the binding of auxin to its receptor, which leads to the activation of a signaling cascade involving several proteins, including the auxin-inducible transcription factor (Aux-IAA) and the auxin-responsive element (ARE). This cascade ultimately leads to the activation of auxin-responsive genes, which regulate plant growth and development. In this review, we discuss the role of auxin in plant growth and development, focusing on the signaling pathways involved in auxin action.

Abstract: The use of computer-aided design (CAD) systems for the design of mechanical parts is becoming increasingly common. This paper presents a method for the automatic generation of a CAD model of a mechanical part from a 2D drawing. The method is based on the use of a set of rules that define the relationship between the 2D drawing and the 3D model. The rules are applied to the 2D drawing to generate the 3D model. The method is implemented in a software package that can be used to generate CAD models of mechanical parts from 2D drawings.

Guide To The Fragment Molecular Orbital Method In Gamess: From One Atom To A Million, At Your Service Dmitri G Fedorov, 2023-02-17 The fragment molecular orbital FMO method is a fast linear scaling quantum mechanical method employed by chemists and physicists all over the world It provides a wealth of properties of fragments from quantum

chemical calculations a bottomless treasure pit for data mining and machine learning However there is no user friendly description of its usage in the widely employed quantum chemical open source software GAMESS nor is there any book covering the usage of GAMESS in general This leaves very many interested users to their own devices to get through a variety of problems with very cryptic descriptions of keywords in the program manual and no guide whatsoever as to what options should be set for particular scientific tasks This book is the panacea to many frustrations The main focus of the book is to build a solid bridge connecting FMO users to GAMESS by giving a helpful introduction of various FMO methods as needed for particular problems found in computational chemistry and describing in detail how to do these simulations and understand the results from the output of the program The book also covers parallelization strategies for attaining high parallel efficiency in massively parallel computations and provides means to analyze performance and design a solution for overcoming performance bottlenecks A special section is devoted to dealing with problems in executing GAMESS arising from computational environment and user errors Finally 14 carefully selected types of applications are discussed in detail describing the input keywords and explaining where to find the main results in the text based output **Cars & Parts** ,1995
