don't want to work Surely the people who design keyboards and terminals must be working to change their products if they are unsafe Surely so long as you're a good worker and keep your mind on your job nothing bad will happen to you The bad news is You can be hurt by working at a computer The good news is that many of the same factors that pose a risk to you are within your own control You can take action on your own to promote your own health whether or not your terminal manufacturer keyboard designer medical provider safety trainer and boss are working diligently to protect you The Computer User's Survival Guide looks squarely at all the factors that affect your health on the job including positioning equipment work habits lighting stress radiation and general health Through this guide you will learn a continuum of neutral postures that you can utilize at different work tasks how radiation drops off with distance and what electrical equipment is responsible for most exposure how modern office lighting is better suited to working on paper than on a screen and what you can do to prevent glare simple breathing techniques and stretches to keep your body well oxygenated and relaxed even when you sit all day how reading from a screen puts unique strains on your eyes and what kind of vision breaks will keep you most productive and rested what's going on under the skin when your hands and arms spend much of the day mousing and typing and how you can apply that knowledge to prevent overuse injuries The Computer User's Survival Guide is not a book of gloom and doom It is a guide to protecting yourself against health risks from your computer while boosting your effectiveness and your enjoyment of work

Electronic Feedback in Large University Statistics Courses Andreas Maur, 2023-05-18 Digital tools and pedagogies in public higher education are unfolding their potential by providing large groups of students with automated continuous learning and feedback opportunities However most of the existing studies are cross-sectional unidirectional and focus on a limited selection of relevant target variables and instructional features In a field study Andreas Maur used longitudinal latent structural equation modelling with a large sample of students to analyse the interrelations between formative feedback from electronic quizzes and different facets of the control value theory of achievement emotions The results suggest that regular quizzes most consistently improve self-efficacy anxiety effort course enjoyment and

hopelessness over time Only feedback effects related to intrinsic motivation were consistently less effective for female and less proficient students and for students in traditional versus flipped classrooms These findings highlight the need to scale up formative feedback in higher education and to cultivate feedback systems with higher levels of sophistication adaptability and gamification mechanics
