

▲ *Aeshna isoceles* male. Note the contrasting green eyes.

Identification

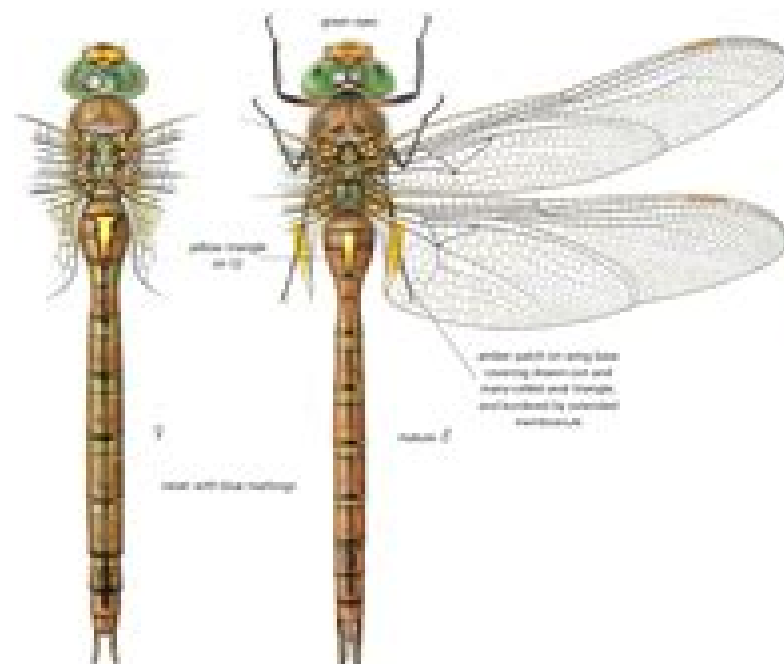

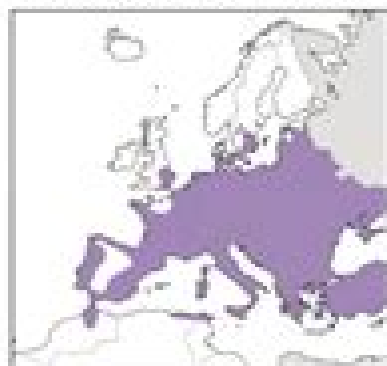

General A brown and rather plain hawker, with largely clear wings and conspicuous green eyes. The yellow triangle on 12 is diagnostic, as are the colour and shape of the thor base. Males patrol mainly ditches, reedy lakesides and other lush, calm waters.

Field characters tot 62–66mm, Ab 47–54mm, Ho 28–45mm. Between *A. mixta* and *A. juncea* in size. Entire body is brown and virtually unmarked,

apart from a slightly dark crest on the frons, two yellow bands on the thorax sides, dark lines on the abdomen and a conspicuous yellow triangle on upperside 12. When mature, the green eyes contrast with the brown body. Wings clear, with dark veins and a diagnostic deep amber patch at the thor base. The all-brown *Aeshna grandis* is larger and has entirely amber wings, and blue or yellow spots on the sides of the abdomen. The brownish *Anax sphingiger* and *A. parthenope* can have greenish eyes, but have an unbandied thorax and blue 'saddle' at the abdomen base.

Head characters Male membrane and anal triangle elongated, the latter with three to seven cells (often two and seldom more than four in *Aeshna*). Male upper appendages more slender than those of other *Aeshna*, with tooth near base on underside.

Variation Individuals from the southern Balkans eastwards tend to have extended yellow thorax markings with prominent nail-shaped antehumeral stripes. These have been treated as top antehumerali but are probably just paler due to the warmer climate and therefore do not warrant taxonomic status.

Behaviour Unlike most hawks, males frequently perch during periods.

Occurrence

Range and status Widespread but very local in much of its range, especially in south-west, often numerous where present. Extends to Central Asia in the east.

Habitat Ditches, marshes, ponds and lakes with rich vegetation. Favours swamps of water-solider (*Stratiotes aloides*) in most of its northern range. Sometimes on running water in the south.

Flight season May to August in most of its range, most abundant in June, earlier than most *Aeshna*.
