Sustainability in Manufacturing Günther Seliger, 2007-05-26 Population growth and increasing resource consumption
are global challenges which have to be coped by sustainable development Increasing the use productivity of resources by
new cycle economical concepts supported by innovative technologies is significantly contributing to this ambitious goal These
challenges were accepted by several research institutions at the Technical University Berlin and lead to the establishment of
the Collaborative Research Center Sfb 281 Disassembly Factories for the Recovery of Resources in Product and Material
Cycles funded by the German Research Foundation in 1995 Numerous scientific results are available after 12 years of
research which are discussed within this book Management of industrial experience and education technology innovation for
products and processes of cycle economy are presented in a systemic frame of ecological economical and socio political
criteria under the consideration of human necessities and limit natural resources Methods and tools for a sustainable product
development planning methods for cycle economy the presentation of concepts for product accompanying information
systems and innovative disassembly technology are exemplarily to be distinguished The book makes therefore a contribution
to the increase of use productivity of resources The challenges of sustainable manufacturing cannot be coped on a regional
scale but have to be addressed on a global level For that reason long lasting international cooperation has been established
within the Sfb 281 enriching the research work International partners of TUB have contributed for the success of this book
