### Angle Relationships

When two angles form a relationship where their sum is equal to  $180^\circ$ , we say they are **supplementary**. If the angle is less than  $90^\circ$ , then it is acute. If the angle is greater than  $90^\circ$ , then it is obtuse.

Supplementary angles always appear on the same side of the transversal line because they are formed by the same transversal line and the same two lines.

### Example 1:

- a. Find the supplement of each angle.
- b. If these angles were to form a right angle, what would be the measure of each angle?
- c. Find the exterior angle.

**ANSWER:**

### Vertical Angles

Vertical angles are opposite of one angle.

- a. If one angle measures  $30^\circ$ ,
- b. If one angle measures  $120^\circ$ ,
- c. If one angle measures  $100^\circ$ ,

d. Identify which angle is a vertical angle, not adjacent. This is the angle that is opposite of the angle for the adjacent angle.

- e. If  $\angle A$  is  $30^\circ$ ,  $\angle B$  is  $60^\circ$ .

f. If  $\angle A$  is  $120^\circ$ ,  $\angle B$  is  $60^\circ$ .

g. If  $\angle A$  is  $100^\circ$ ,  $\angle B$  is  $80^\circ$ .

*The Teaching and Learning of Mathematics at University Level* Derek Holton,2006-04-11 This book is the final report of the ICMI study on the Teaching and Learning of Mathematics at University Level As such it is one of a number of such studies that ICMI has commissioned The other Study Volumes cover assessment in mathematics education gender equity research in mathematics education the teaching of geometry and history in mathematics education All ofthese Study Volumes represent a statement of the state of the art in their respective areas We hope that this is also the case for the current Study Volume The current study on university level mathematics was commissioned for essentially four reasons First universities world wide are accepting a much larger and more diverse group of students than has been the case Consequently universities have begun to adopt a role more like that of

the school system and less like the elite institutions of the past As a result the educational and pedagogical issues facing universities have changed Second although university student numbers have increased significantly there has not been a corresponding increase in the number of mathematics majors Hence mathematics departments have to be more aware of their students needs in order to retain the students they have and to attract future students As part of this awareness departments of mathematics have to take the teaching and learning of mathematics more seriously than perhaps they have in the past    [Canadian Books in Print](#) ,1997    [Mugarnas](#) Oleg Grabar,1987 Oleg Grabar On Catalogues Exhibitions and Complete Works Jonathan M Bloom The Mosque of the Qarafa in Cairo Leonor Fernandes The Foundation of Baybars al Jashankir Its Waqf History and Architecture Howard Crane Some Archaeological Notes on Turkish Sardis Nancy Shatzman Steinhardt Siyah Qalem and Gong Kai An Istanbul Album Painter and a Chinese Painter of the Mongolian Period Do gan Kuban The Style of Sinan s Domed Structures Yasser Tabbaa Bronze Shapes in Iranian Ceramics of the Twelfth and Thirteenth Centuries Mehrdad Shokoohy and Natalie H Shokoohy The Architecture of Baha al Din Tughrul in the Region of Bayana Rajasthan Glenn D Lowry Humayun s Tomb Form Function and Meaning in Early Mughal Architecture Peter Alford Andrews The Generous Heart or the Mass of Clouds The Court Tents of Shah Jahan Priscilla P Soucek Persian Artists in Mughal India Influences and Transformations A J Lee Islamic Star Patterns    *Forthcoming Books* Rose Arny,2003-12

**Conference Publication** ,1991    **The Academy** ,1878    *Knowledge In Motion* Jan Nespor,2014-01-21 Using an analysis of learning by a case study comparison of two undergraduate courses at a United States University Nespor examines the way in which education and power merge in physics and management Through this study of politics and practices of knowledge he explains how students once accepted on these courses are facilitated on a path to power physics and management being core disciplines in modern society Taking strands from constructivist psychology post modern geography actor network theory and feminist sociology this book develops a theoretical language for analysing the production and use

of knowledge He puts forward the idea that learning usually viewed as a process of individual minds and groups in face to face interaction is actually a process of activities organised across space and time and how organisations of space and time are produced in social practice Within this context educational courses are viewed as networks of a larger whole and individual courses are points in the network which link a wider relationship by way of texts tasks and social practices intersecting with them The book shows how students enrolled on such courses automatically become part of a network of power and knowledge     Journal of Education ,1884     **Bowker's Complete Video Directory, 1999 ,1999**
