Two-Dimensional Geometries: A Problem-Solving Approach C. Herbert Clemens, 2019-03-20 This book on two dimensional geometry uses a problem solving approach to actively engage students in the learning process The aim is to guide readers through the story of the subject while giving them room to discover and partially construct the story themselves The book bridges the study of plane geometry and the study of curves and surfaces of non constant curvature in three dimensional Euclidean space One useful feature is that the book can be adapted to suit different audiences The first half of the text covers plane geometry without and with Euclid's Fifth Postulate followed by a brief synthetic treatment of spherical geometry through the excess angle formula This part only requires a background in high school geometry and basic trigonometry and is suitable for a quarter course for future high school geometry teachers A brief foray into the second half could complete a semester course The second half of the text gives a uniform treatment of all the complete simply connected two dimensional geometries of constant curvature one geometry for each real number its curvature including their groups of isometries geodesics measures of lengths and areas as well as formulas for areas of regions bounded by polygons in terms of the curvature of the geometry and the sum of the interior angles of the polygon A basic knowledge of real linear algebra and calculus of several real variables is useful background for this portion of the text *Journey into Geometries* Marta Sved, 2020-07-31 *Educational Paths to Mathematics* Uwe Gellert, Joaquim Giménez Rodríguez, Corinne Hahn, Sonia Kafoussi, 2015-05-18 This book offers fresh insight and understanding of the many ways in which children youth and adults may find their paths to mathematics The chapters of the volume offer and analyse promising new ways into mathematics The focus is on spaces and modalities of learning dialogue and inquiry embodiment and aesthetic experience information and communication technology and on the use of mathematics in public communication The chapters present new mathematical activities and conceptions enriching the repertoire of mathematics education practices Critical commentaries discuss the innovative potential of the new approaches to the teaching and learning of mathematics As a consequence the commentaries point to requirements and open issues in the field of research in mathematics education The volume is remarkably international Teachers and researchers from 14 countries authored 21 chapters and 7 commentaries The reader is invited to reflect on the particular effect of presenting avenues to mathematics contrived in diverse national settings in which the praxis of mathematics education might look different compared to what happens in the reader's place The book starts a series of sourcebooks edited by CIEAEM the Commission Internationale pour l'Etude et l'Amélioration de l'Enseignement des Mathématiques International Commission for the Study and Improvement of Mathematics Education **Nature** Sir Norman Lockyer, 1913 *The Fifth Postulate* Jason Socrates Bardi, 2008-12-01 The great discovery that no one wanted to make It's the dawn of the Industrial Revolution and Euclidean geometry has been profoundly influential for centuries One mystery remains however Euclid's fifth postulate has eluded for two thousand years all attempts to prove it What happens when three

nineteenth century mathematicians realize that there is no way to prove the fifth postulate and that it ought to be discarded along with everything they'd come to know about geometry Jason Socrates Bardi shares the dramatic story of the moment when the tangible and easily understood world we live in gave way to the strange mind blowing world of relativity curved space time and more Jason Socrates Bardi tells the story of the discovery of non Euclidian geometry one of the greatest intellectual advances of all time with tremendous clarity and verve I loved this book John Horgan author The End of Science and Rational Mysticism An accessible and engrossing blend of micro biography history and mathematics woven together to reveal a blockbuster discovery David Wolman author of Righting the Mother Tongue and A Left Hand Turn around the World

Thinking Geometrically Thomas Q. Sibley, 2015-08-14 Thinking Geometrically A Survey of Geometries is a well written and comprehensive survey of college geometry that would serve a wide variety of courses for both mathematics majors and mathematics education majors Great care and attention is spent on developing visual insights and geometric intuition while stressing the logical structure historical development and deep interconnectedness of the ideas Students with less mathematical preparation than upper division mathematics majors can successfully study the topics needed for the preparation of high school teachers There is a multitude of exercises and projects in those chapters developing all aspects of geometric thinking for these students as well as for more advanced students These chapters include Euclidean Geometry Axiomatic Systems and Models Analytic Geometry Transformational Geometry and Symmetry Topics in the other chapters including Non Euclidean Geometry Projective Geometry Finite Geometry Differential Geometry and Discrete Geometry provide a broader view of geometry The different chapters are as independent as possible while the text still manages to highlight the many connections between topics The text is self

contained including appendices with the material in Euclid's first book and a high school axiomatic system as well as Hilbert's axioms. Appendices give brief summaries of the parts of linear algebra and multivariable calculus needed for certain chapters. While some chapters use the language of groups, no prior experience with abstract algebra is presumed. The text will support an approach emphasizing dynamical geometry software without being tied to any particular software.
