

A Closer Look at Area of Regular Polygons **NOT**

A **regular polygon** is a polygon in which all sides are congruent and all angles are congruent.

Equilateral triangle
Equilateral triangle

Square

Regular pentagon

Any regular polygon can be decomposed into nonoverlapping congruent triangles regions. The area of this regular polygon can be found by finding the area of one of the triangular regions and multiplying by the number of sides of the polygon. This method can be written as follows in the formula:

$$\text{Area of a regular polygon} = \frac{1}{2}Pn$$

where P represents the perimeter and n represents the number

The **apothem** is a segment that connects the center of a regular polygon perpendicularly to a side of this **regular polygon**. The **apothem** is also the perpendicular distance from the center of this figure to a side. The **apothem** divides P into the **regular polygon**. In Figure 1 below, a is the length of the apothem.

The **radius** is a segment that connects from the center of this regular polygon to a vertex of this polygon. The **radius** is also the distance from the center of the polygon to a vertex of the polygon. The **radius** divides an interior angle of this regular polygon. In Figure 1 below, r is the length of this radius.

Triangles of special right triangles, $30^\circ-60^\circ-90^\circ$ and $45^\circ-45^\circ-90^\circ$ and the trigonometric ratios can be used to solve problems involving regular polygons.

 Beckmann, Denisse R. Thompson, Rheta N. Rubenstein, 2009-11-02 Too many high school students faced with mathematics in
 courses at the level of algebra and beyond find themselves struggling with abstract concepts and unwilling to pursue further
 study of mathematics When students curtail their course taking in mathematics they may be impacting their college and
 career options Thus high school mathematics teachers have the responsibility to help students recognize the value and
 importance of mathematics while also designing instruction that makes mathematics accessible to all students Ball and Bass
 2000 as well as other mathematics educators have recognized that mathematics teachers not only need to know mathematics
 content and mathematics pedagogy i e teaching strategies but they also need to know how these ideas are integrated This
 mathematical knowledge for teaching is the knowledge that teachers of mathematics need and it differs from the knowledge
 that research or applied mathematicians must know This text is designed to provide teachers with insights into this
