Cómo actuar, 1987 *Pampean Lakes* Eduardo Luis Piovano, Silvina Stutz, Juan Antonio Morales, Daniel Ariztegui, 2025-07-20. This book is for advanced students, researchers and professionals from Earth and Environmental Sciences. The Argentinean Pampa plain is an extensive region of ca. 673 000 km² between 30° S and 38° S in South America. The region encompasses a large number of lakes, 50 000 of highly variable sizes. Pampean lakes have been very sensitive to past and recent climatic change. Thus, paleolimnological research across the Pampa plain provides unique insights into regional environmental variability since the Late Pleistocene up to the most recent hydroclimatic changes. These lakes are sensors of both the documented increase in precipitation that occurred after the 1970s/seventies as well as substantial changes in land use. It compiles the most outstanding information of the region for the last 30 years regarding ecological aspects, changes in land use processes and their impact on water bodies, paleolimnological reconstructions, archeology, hydroclimatic variability and associated human dimension. This knowledge provides environmental information that is fundamental to develop integrated water management projects.
