Hoosh Jason C. Anthony, 2012-11-01 Antarctica the last place on Earth is not famous for its cuisine Yet it is famous for stories of heroic expeditions in which hunger was the one spice everyone carried At the dawn of Antarctic cuisine cooks improvised under inconceivable hardships castaways ate seal blubber and penguin

breasts while fantasizing about illustrious feasts and men seeking the South Pole stretched their rations to the breaking point Today Antarctica's kitchens still wait for provisions at the far end of the planet's longest supply chain Scientific research stations serve up cafeteria fare that often offers more sustenance than style Jason C Anthony a veteran of eight seasons in the U S Antarctic Program offers a rare workaday look at the importance of food in Antarctic history and culture Anthony's tour of Antarctic cuisine takes us from hoosh a porridge of meat fat and melted snow often thickened with crushed biscuit and the scurvy ridden expeditions of Shackleton and Scott through the twentieth century to his own preplanned three hundred meals plus snacks for a two person camp in the Transantarctic Mountains The stories in Hoosh are linked by the ingenuity good humor and indifference to gruel that make Anthony's tale as entertaining as it is enlightening From Northeast Passage to Northern Sea Route ,2022-09-12 The notion of a waterway north of Eurasia conceived in the first half of the sixteenth century remained only a dream for centuries due to ice unmapped coastlines and a lack of geographical knowledge This volume is the first comprehensive scholarly account in English of the slow but steady exploration and commercial exploitation of the Siberian coastal waters and it proves that this was a truly international endeavour However in the end the Northern Sea Route as a through traverse route came to be used primarily by the Soviet Union for which it became a crucial vehicle for the geopolitical and economic integration of its vast territories As an international trade route the Northern Sea Route is only today about to win its way essentially as a result of global warming This being the case should we rejoice or despair **One Giant Leap** Charles Fishman,2020-09-22 The New York Times bestselling meticulously researched and absorbingly written The Washington Post story of the trailblazers and the ordinary Americans on the front lines of the epic Apollo 11 moon mission President John F Kennedy astonished the world on May 25 1961 when he announced to Congress that the United States should land a man on the Moon by 1970 No group was more surprised than the scientists and engineers at NASA who suddenly had less than a decade to invent space travel When Kennedy announced that goal no one knew how to navigate to the Moon No one knew how to build a rocket big enough to reach the Moon or how to build a computer small enough and powerful enough to fly a spaceship there No one knew what the surface of the Moon was like or what astronauts could eat as they flew there On the day of Kennedy's historic speech America had a total of fifteen minutes of spaceflight experience with just five of those minutes outside the atmosphere Russian dogs had more time in space than US astronauts Over the next decade more than 400 000 scientists engineers and factory workers would send twenty four astronauts to the Moon Each hour of space flight would require one million hours of work back on Earth to get America to the Moon on July 20 1969 A veteran space reporter with a vibrant touch nearly every sentence has a fact an insight a colorful quote or part of a piquant anecdote The Wall Street Journal and in One Giant Leap Fishman has written the sweeping definitive behind the scenes account of the furious race to complete one of mankind's greatest achievements It's a story filled with surprises from the item the astronauts almost forgot to take with them the American flag to the extraordinary impact Apollo would have back on

Earth and on the way we live today From the research labs of MIT where the eccentric and legendary pioneer Charles Draper created the tools to fly the Apollo spaceships to the factories where dozens of women sewed spacesuits parachutes and even computer hardware by hand Fishman captures the exceptional feats of these ordinary Americans It s been 50 years since Neil Armstrong took that one small step Fishman explains in dazzling form just how unbelievable it actually was Newsweek
