exhibiting risk averse behaviors This difference was more exaggerated in a within subjects comparison contrasting the same individuals in situations of high and low failure Finally persistence after failure was associated with learning across the full sample of subjects Regardless of condition or failure rate students who persisted more after failure also learned more This study together with the author s related body of work provides compelling evidence that an EPB is a viable intervention for encouraging persistence in the face of failure Math Expressions North Carolina Houghton Mifflin Harcourt,2011-08-30
