Disconnect the vehicle battery to avoid short circuits / electrical shock before wiring trailer

Trailer Wiring Guide

Towing Vehicle Wiring:
Use Short Harness

1. Disconnect the vehicle battery to avoid short circuits / electrical shock.
2. Attach the white wire to a grounded location on towing vehicle.
3. Connect the yellow wire to the driver's side stop and turn signal circuit.
4. Connect the green wire to the passenger's side stop and turn signal circuit. A converter between the vehicle and trailer (vehicles with amber turn signal lights on rear of vehicle).

Trailer Wiring: Use Long Harness

1. Select mounting locations at the rear of the trailer for the red stop / tail / turn and side marker lights so that they are to the extreme left and right edge of the trailer 15" (38 cm) to 80" (192 cm) above the road surface. When installed, the lens surface must be visible a minimum of 45° to the right and left and 20° from above or below the trailer in each mounting location (fill two 14" (34 mm) holes on 2" (51 mm) centers).
2. The driver's side light has a clear window for the license illuminator. With the window facing down, push bolts through the slots on narrow end of license bracket provided. Insure that angle portion of license bracket faces clear window. Attach this light and bracket to the driver's side of the trailer. Attach the other light to the passenger's side of the trailer. Add lock washers and tighten securely. **CAUTION: DO NOT OVERTIGHTEN.** Ensure that mounting bolts are properly grounded or lights won't operate properly. (If necessary, run a separate ground wire from the light to the plug at the front of the trailer for each light)
3. Keep the plug end of long wiring harness at tongue of trailer (ensure you leave harness extended at least 1 foot longer than the end of the tongue to allow attachment of plug to vehicle). Attach the white wire to a grounded location on trailer using eyelet terminal and #8 self-tapping screw. (It is a better idea to run a separate ground wire from harness to each light due to the low voltage draw of the lights)
4. Run yellow wire and one brown wire along driver's side of trailer frame. Attach three metal clips to hold wiring. Place clips over wires and attach to trailer. Be sure that wiring doesn't hang down or drag. Now attach the remaining green and brown wires on the passenger side of the trailer frame.
5. Strip 1/2" of insulation from each wire on the harness. Attach harness to light matching wiring colors using provided butt connectors. Crimp butt connector to retain wires in connector. Use a hair dryer or lighter to shrink the tubing on the connector. Make sure the tubing has sealed the wires.
6. After confirming that all wiring is correct, reconnect the battery
7. Test lights (if running lights work but turn signal and brake lights don't work, check grounds). Some vehicles require a converter between the vehicle and trailer (vehicles with amber turn signal lights on rear of vehicle).
