2019-20 MATRIX Annals Jan de Gier, Cheryl E. Praeger, Terence Tao, 2021-02-10 MATRIX is Australia's international and residential mathematical research institute. It facilitates new collaborations and mathematical advances through intensive residential research programs each 1-4 weeks in duration. This book is a scientific record of the ten programs held at MATRIX in 2019 and the two programs held in January 2020: Topology of Manifolds Interactions Between High and Low Dimensions; Australian German Workshop on Differential Geometry in the Large Aperiodic Order; meets Number Theory; Ergodic Theory; Diophantine Approximation and Related Topics; Influencing Public Health Policy with Data-informed Mathematical Models of Infectious Diseases; International Workshop on Spatial Statistics; Mathematics of Physiological Rhythms; Conservation Laws; Interfaces and Mixing; Structural Graph Theory; Downunder Tropical Geometry and Mirror Symmetry; Early Career Researchers Workshop on Geometric Analysis and PDEs; Harmonic Analysis and Dispersive PDEs; Problems and Progress. The articles are grouped into peer-reviewed contributions and other contributions. The peer-reviewed articles present original results or reviews on a topic related to the MATRIX program; the remaining contributions are predominantly lecture notes or short articles based on talks or activities at MATRIX.

Quantitative Risk Analysis of Air Pollution Health Effects Louis Anthony Cox Jr., 2020-11-06 This book highlights quantitative risk assessment and modeling methods for assessing health risks caused by air pollution as well as characterizing and communicating remaining uncertainties. It shows how to apply modern data science, artificial intelligence, and machine learning, causal analytics, mathematical modeling, and risk analysis to better quantify human health risks caused by environmental and occupational exposures to air pollutants. The adverse health effects that are caused by air pollution and preventable by reducing it instead of merely being statistically associated with exposure to air pollution and with other many conditions from cold weather to low income have proved to be difficult to quantify with high precision and confidence largely because correlation is not causation. This book shows how to use recent advances in causal analytics and risk analysis to determine more accurately how reducing exposures affects human health risks. *Quantitative Risk Analysis of Air Pollution Health Effects* is divided into three parts. Part I focuses mainly on quantitative simulation modelling of biological responses to exposures and resulting health risks. It considers occupational risks from asbestos and crystalline silica as examples showing how dynamic simulation models can provide insights into more effective policies for protecting worker health. Part II examines limitations of regression models and the potential to instead apply machine learning, causal analysis, and Bayesian network learning methods for more accurate quantitative risk assessment with applications to occupational risks from inhalation exposures. Finally, Part III examines applications to public health risks from air pollution, especially fine particulate matter PM_{2.5} air pollution. The book applies freely available browser analytics software and data sets that allow readers to download data and carry out many of the analyses described in addition to applying the techniques discussed to their own data. <http://cox>
