Biomarkers for Huntington's Disease Elizabeth A. Thomas,Georgia M. Parkin,2023-10-12 Huntington s disease HD is a fatal inherited neurodegenerative disorder characterized by chorea motor instabilities psychiatric manifestations and cognitive decline Early genetic testing provides an opportunity for clinical interventions aimed at delaying onset and or slowing progression of disease however current treatments for HD are limited with only two FDA approved drugs available to manage chorea Encouragingly however several disease modifying treatment approaches are in the therapeutic pipeline with more than 200 clinical studies and many more preclinical studies in the works Robust and reliable biomarkers are needed to predict disease onset monitor disease progression and assess treatment responses More specifically biomarkers to stratify patients for clinical trials and biomarkers to track drug efficacy will certainly lead to improved clinical trial design and success This book represents the first book focused solely on biomarkers for HD and represents a distinct resource that will be informative not only for clinicians and those involved in clinical trial design but also for a wide range of neurodegenerative disease researchers This edited volume is written by top leaders in the field and takes a cross disciplinary approach to cover a broad spectrum of biomarker types in order to provide the latest advances in the development of biochemical molecular imaging and digital biomarkers that have been investigated for HD With the ultimate goal of treating patients the development of disease associated biomarkers has never been more important *University of Michigan Official Publication*
