Implementing IT Governance - A Pocket Guide Dr. Gad Selig, 2008-04-12. The issues, opportunities, and challenges of aligning information technology more closely with an organization and effectively governing an organization's Information Technology (IT) investments, resources, major initiatives, and superior uninterrupted service is becoming a major concern of the Board and executive management in enterprises on a global basis. An integrated and comprehensive approach to the alignment, planning, execution, and governance of IT and its resources has become critical to more effectively align, integrate, invest, measure, deploy, service, and sustain the strategic and tactical direction and value proposition of IT in support of organizations. Much has been written and documented about the individual components of IT Governance, such as strategic planning, demand portfolio, investment management, program and project management, IT service management, and delivery, strategic sourcing, and outsourcing, performance management, and metrics like the balanced scorecard, compliance, and others. Much less has been written about a comprehensive and integrated IT Business Alignment, Planning, Execution, and Governance approach. This new title fills that need in the marketplace and gives readers a structured and practical solution using the best of the best principles available today. The book is divided into nine chapters which cover the three critical pillars necessary to develop, execute, and sustain a robust and effective IT governance environment: leadership and proactive people and change agents, flexible and scalable processes, and enabling technology. Each of the chapters also covers one or more of the following action-oriented topics: demand management and alignment, the why and what of IT strategic planning, portfolio investment management, decision authority, etc. Execution management includes the how: Program, Project, Management, IT Service Management, and Delivery with IT Infrastructure Library (ITIL) and Strategic Sourcing, and outsourcing, performance, risk, and contingency management, etc.

g includes COBIT the balanced scorecard and other metrics and controls and leadership teams and people skills
