1 General management practices		
Architecture management	— -/-	— ITIL V3 includes an introduction to enterprise architecture management in the service strategy publication.
Continual improvement	— The seven-step improvement process	— Continual improvement in ITIL 4 is about ongoing improvement of the organization's services, practices and all other elements required for the provision of services. — In ITIL V3, Continual service improvement (CSI) is the fifth stage of the service lifecycle. The ITIL V3 CSI publication describes CSI principles, methods and techniques and specifies one CSI process: The "seven-step improvement process". — ITIL 4 advises that organizations use a continual improvement register (CIR) to manage their improvement ideas. This corresponds to the CSI register used in ITIL V3, and also to the service improvement plan (SIP).
Information security management	— Information security management — Access management	— One aspect of this ITIL 4 practice is identity and access management, which corresponds to the ITIL V3 process of access management.
Knowledge management	— Knowledge management	— -/-
Measurement and reporting	— -/-	— ITIL V3 does not define a measurement and reporting process, but measurement and reporting are key activities in several ITIL V3 processes, such as service level management and the seven-step improvement process.
Organizational change management	— -/-	— Organizational change management (OCM) is a set of management techniques and capabilities rather than a process. — OCM addresses the human side of changes and is different from the ITIL V3 process of change management (which aims to minimize risk from changes to the operating environment).
Portfolio management	— Service portfolio management — Business relationship management	— The ITIL 4 practice of portfolio management refers to various types of portfolios, such as services, projects, and customers.
