Mathematical Intelligence Mubeen Junaid,2022-11-01 A fresh exploration into the human nature versus technology argument revealing an unexpected advantage that humans have over our future robot masters we re actually good at mathematics There s so much discussion about the threat posed by intelligent machines that it sometimes seems as though we should simply surrender to our robot overlords now But Junaid Mubeen isn t ready to throw in the towel just yet As far as he is concerned we have the creative edge over computers because of a remarkable system of thought that humans have developed over the millennia It s familiar to us all but often badly taught in schools and misrepresented in popular discourse math Computers are of course brilliant at totting up sums pattern seeking and performing mindless tasks of well computation For all things calculation machines reign supreme But Junaid identifies seven areas of intelligence where humans can retain a crucial edge And in exploring these areas he opens up a fascinating world where we can develop our uniquely human mathematical talents Just a few of the fascinating subjects covered in MATHEMATICAL INTELLIGENCE include Humans are endowed with a natural sense of numbers that is based on approximation rather than precise calculation Our in built estimation skills complement the precision of computers Interpreting the real world depends on both What sets humans apart from other animals is language and abstraction We have an extraordinary ability to create powerful representations of knowledge more diverse than the binary language of computers Mathematics confers the most robust logical framework for establishing permanent truths Reasoning shields us from the dubious claims of pure pattern recognition systems All mathematical truths are derived from a starting set of assumptions or axioms Unlike computers humans have the freedom to break free of convention and examine the logical consequences of our choices Mathematics rewards our imagination with fascinating and on occasion applicable concepts that originate from breaking the rules Computers can be tasked to solve a range of problems but which problems are worth the effort Questioning is as vital to our repertoire of thinking skills as problem solving itself

Religious Schools in Europe Marcel Maussen,Floris Vermeulen,Michael Merry,Veit Bader,2017-10-02 The European Convention on Human Rights guarantees freedom of education including the opportunities to create and operate faith based schools However as European societies become more

religiously diverse and less religious at the same time the role of faith based schools is increasingly being contested Serious tensions have emerged between those who ardently support religious schools in their various forms and those who oppose them Given that faith based schools enjoy basic constitutional guarantees in Europe the controversy around them often surrounds issues of public financing degrees of organisational and pedagogical autonomy and educational practices and management This volume is about the controversies surrounding religious schools in a number of Western European countries The introductory chapter briefly analyses the structural pressures that affect the position of religious schools outlining the relevant institutional arrangements in countries such as Denmark Germany France Ireland the Netherlands and Scotland The following chapters provide a detailed analysis of the discussions and controversies surrounding faith based schools in each country Finally the two concluding chapters aim to provide a bigger comparative picture with regard to these debates about religious education in liberal democratic states and culturally pluralist societies This book was originally published as a special issue of Comparative Education

Policy-Making in the GCC Neil Quilliam, Mark C.

Thompson, 2017-09-11 The GCC is a major player in the post 2011 reordering of the Middle East Despite the rise in prominence of individual Gulf states especially Kuwait Qatar Saudi Arabia and the United Arab Emirates and the growth of the GCC as a collective entity surprisingly little attention has been paid to the actual mechanics of policy making in the region This book analyses the vital role that institutions are coming to play in shaping policy in the Gulf Arab states The research coincides with two key developments that have given institutions new importance in the policy process the emergence of a new generation of leaders in the Gulf and the era of low oil prices Both developments along with dramatic demographic change have compelled state and citizens to re evaluate the nature of the social contract that binds them together Contributors assess the changing relationship between state and citizen and evaluate the role that formal and informal institutions play in mediating such change and informing policy The book shows how academic social and economic institutions are responding to the increasingly complex process of decision making where citizens demand better services and further empowerment and states are obliged to seek wider counsel although wanting to retain ultimate authority With contributions from both academics and practitioners this book will be highly relevant for researchers and policymakers alike
