biological activities of natural and non natural molecules have remained unchanged as one of the most exciting trends in
biotechnological products Most bioactive compounds are usually isolated from plants microorganisms marine organisms and
fungi However the yield of natural products is usually low and requires time consuming procedures for industrial production
Furthermore chemical synthesis is a costly harmful alternative that requires multi step isolation and purification processes
Nevertheless plant molecular engineering has significantly improved using industrially preferred microorganisms such as
Escherichia coli Saccharomyces cerevisiae Corynebacterium Bacillus and Pseudomonas These microorganisms are promising
