The co-occurrence and interrelatedness of risk factors and problem behavior is certainly an important area of research. This volume recognizes the complexity of the developmental processes that influence coping and resilience and the roles sociocultural factors play. The contributors focus on four themes that have emerged in the study of risk and coping over the past decade: interrelatedness of risk and problems, individual variability in resilience and susceptibility to stress processes and mechanisms linking multiple stressors to multiple outcomes and interventions and prevention. Psychologists, pediatricians and others involved in the research or care of children will take great interest in this text.
