Decolonising Science, Technology, Engineering and Mathematics (STEM) in an Age of Technocolonialism

Nhemachena, Artwell,Hlabangane, Nokuthula,Matowanyika, Joseph Z. Z.,2020-03-02 Positing the notions of coloniality of ignorance and geopolitics of ignorance as central to coloniality and colonisation this book examines how colonialists socially produced ignorance among colonised indigenous peoples so as to render them docile and manageable Dismissing colonial descriptions of indigenous people as savages illiterate irrational prelogical mystical primitive barbaric and backward the book argues that imperialists colonialists contrived geopolitics of ignorance wherein indigenous regions were forced to become ignorant hence containable and manageable in the imperial world Questioning the provenance of modernist epistemologies the book asks why Eurocentric scholars only contest the provenance of indigenous knowledges artefacts and scientific collections Interrogating why empire sponsors the decolonisation of universities epistemologies in indigenous

territories while resisting the repatriation restitution of indigenous artefacts the book also wonders why Westerners who still retain indigenous artefacts skulls and skeletons in their museums universities and private collections do not consider such artefacts and skulls to be colonising them as well The book is valuable to scholars and activists in the fields of anthropology museums and heritage studies science and technology studies decoloniality policymaking education politics sociology and development studies

Accountability in education: meeting our commitments UNESCO,2017-10-30 The second edition of the Global Education Monitoring Report GEM Report presents the latest evidence on global progress towards the education targets of the UN Sustainable Development Goals With hundreds of millions of people still not going to school and many not achieving minimum skills at school it is clear education systems are off track to achieve global goals The marginalized currently bear the most consequences but also stand to benefit the most if policy makers pay sufficient attention to their needs Faced with these challenges along with tight budgets and increased emphasis on results oriented value for money countries are searching for solutions Increased accountability often tops the list The 2017 8 GEM Report shows the entire array of approaches to accountability in education It ranges from countries unused to the concept where violations of the right to education go unchallenged to countries where accountability has become an end in itself instead of a means to inclusive equitable and high quality education and lifelong learning for all The report emphasizes that education is a shared responsibility While governments have primary responsibility all actors schools teachers parents students international organizations private sector providers civil society and the media 0 3 have a role in improving education systems The report emphasized the importance of transparency and availability of information but urges caution in how data are used It makes the case for avoiding accountability systems with a disproportionate focus on narrowly defined results and punitive sanctions In an era of multiple accountability tools the report provides clear evidence on those that are working and those that are not Back cover

The African Mother Tongue and Mathematical Ideas Abdul Karim Bangura,2020-06-02 This book by renowned scholar Dr Abdul Karim Bangura combines linguistics and mathematics to show how and why African centred mathematical ideas can be a driving force in Africa s development efforts Bangura explores the concept that Africa has been the centre of the History of Mathematics for thousands of years as the civilizations that emerged across the continent developed contributions which would enrich both ancient and modern understanding of nature through mathematics However scholars and other professionals working in the field of mathematics education in Africa have identified a plethora of issues in carrying out their tasks This is highlighted by one of the most compelling arguments in the book which is that a major reason for these problems is the fact that the African mother tongues has been greatly neglected in the teaching of mathematics in the continent Bangura asserts that a change has to be made in order for Africa to benefit from the exceptional opportunities mathematics offer showing that even if there is a great body of work connecting linguistics and mathematics few analyses have been performed on the link between African languages and mathematics and

the ones that have been made are not theoretically grounded on linguistics Thus the book begins by identifying the objects of study of linguistics and mathematics and delineates which ones they have in common Next since the object of study of linguistics is language the nine design features of language are employed to examine each of the objects as it pertains to African languages After that mathematical ideas of sustainability and those of tipping points are suggested as means to help Africa s development efforts *Gendering Ethnicity in African Women's Lives* Jan Bender Shetler, 2015-05-05 The elegists ancient Rome s most introspective poets filled their works with vivid first person accounts of dreams Emma Scioli examines these varied and visually striking textual dreamscapes arguing that the poets exploited dynamics of visual representation to share with readers the intensely personal experience of dreaming *Handbook of Research on Politics in the Computer Age* Solo, Ashu M. G., 2019-08-30 Technology and particularly the Internet have caused many changes in the realm of politics Aspects of engineering computer science mathematics or natural science can be applied to politics Politicians and candidates use their own websites and social network profiles to get their message out Revolutions in many countries in the Middle East and North Africa have started in large part due to social networking websites such as Facebook and Twitter Social networking has also played a role in protests and riots in numerous countries The mainstream media no longer has a monopoly on political commentary as anybody can set up a blog or post a video online Now political activists can network together online The Handbook of Research on Politics in the Computer Age is a pivotal reference source that serves to increase the understanding of methods for politics in the computer age the effectiveness of these methods and tools for analyzing these methods The book includes research chapters on different aspects of politics with information technology engineering computer science or math from 27 researchers at 20 universities and research organizations in Belgium Brazil Cape Verde Egypt Finland France Hungary Italy Mexico Nigeria Norway Portugal and the United States of America Highlighting topics such as online campaigning and fake news the prospective audience includes but is not limited to researchers political and public policy analysts political scientists engineers computer scientists political campaign managers and staff politicians and their staff political operatives professors students and individuals working in the fields of politics e politics e government new media and communication studies and Internet marketing Social Computing, Behavioral-Cultural Modeling and Prediction William G.
