The following topics are covered: An historical account of the ProCoS project, Hybrid Systems, Correctness of Concurrent Algorithms, Interfaces and Linking, Automatic Verification, Run time Assertions, Checking Formal and Semi Formal Methods. *Provably Correct Systems* provides researchers, designers and engineers with a complete overview of the ProCoS initiative, past and present, and explores current developments and perspectives within the field.

Building Performance Simulation for Design and Operation Jan L.M. Hensen, Roberto Lamberts, 2012-09-10 Effective building performance simulation can reduce the environmental impact of the built environment, improve indoor quality and productivity and facilitate future innovation and technological progress in construction. It draws on many disciplines including physics, mathematics, material science, biophysics and human behavioural, environmental and computational sciences. The discipline itself is continuously evolving and maturing, and improvements in model robustness and fidelity are constantly being made. This has sparked a new agenda focusing on the effectiveness of simulation in building life cycle processes. *Building Performance Simulation for Design and Operation* begins with an introduction to the concepts of performance indicators and targets, followed by a discussion on the role of building simulation in performance based building design and operation. This sets the ground for in depth discussion of performance prediction for energy demand, indoor environmental quality including thermal, visual, indoor air quality and moisture phenomena, HVAC and renewable system performance, urban level modelling, building operational optimization and automation. Produced in cooperation with the International Building Performance Simulation Association (IBPSA) and featuring contributions from fourteen internationally recognised experts in this field, this book provides a unique and comprehensive overview of building performance simulation for the complete building life cycle from conception to demolition. It is primarily intended for advanced students in building services engineering and in architectural, environmental or mechanical engineering and will be useful for building and systems designers and operators.
