Specification and Design Methodology for Real-Time Embedded Systems

Randall S. Janka, 2012-12-06

Specification and design methodology has seen significant growth as a research area over the last decade tracking but lagging behind VLSI design technology in general and the CAD industry in particular The commercial rush to market tries to leverage existing technology which fuels CAD design tool development Paralleling this is very active basic and applied research to investigate and move forward rational and effective methodologies for accomplishing digital design especially in the field of hardware software codesign It is this close relationship between industry and academia that makes close cooperation between researchers and practitioners so important and monographs like this that combine both abstract concept and pragmatic implementation deftly bridge this often gaping chasm It was at the IEEE ACM Eighth International Symposium on Hardware Software Codesign where I met the author of this monograph Dr Randall Janka who was presenting some of his recent dissertation research results on specification and design methodology or as he has so succinctly defined this sometimes ambiguous concept the tools and rules Where so many codesign researchers are trying to prove out different aspects of codesign and using toy applications to do so Dr Janka had developed a complete specification and design methodology and prototyped the infrastructure and proven its viability utility and effectiveness using a demanding real world application of a real time synthetic aperture radar imaging processor that

MATLAB in der Ingenieurpraxis Wolf Dieter

Pietruszka, 2015-02-27 Das Programmsystem MATLAB ist ein Werkzeug zur numerischen Bearbeitung von einfachen bis hin zu komplexen technischen Systemen. Es ist zur schnellen Analyse und Synthese dynamischer Vorgänge insbesondere in der Forschung und Entwicklung geeignet und wird heute zunehmend in der Industrie eingesetzt. Sein Platz in der Ausbildung an Universitäten, Hochschulen und Fachhochschulen ist seit langem unumstritten und gewinnt weiter an Bedeutung. Mit MATLAB gelingt es den Studierenden fächerübergreifend mit nur einer Plattform während des gesamten Studiums an der rechnergestützten Bearbeitung von Problemen in der Mathematik, der Physik und speziell der Regelungstechnik, der Mechanik, der Mechatronik und der Elektrotechnik heran zu führen. In Lehrveranstaltungen können praxisrelevante Beispiele anschaulich bearbeitet und dargestellt werden. MathWorks Inc. der Herausgeber von MATLAB Produkten unterstützt diese Aktivitäten zunehmend. Darüber hinaus existiert ein sehr umfangreiches Literaturangebot. Dies beinhaltet vielfach ausführliche Beschreibungen der MATLAB Handbücher und Online Hilfen und vermittelt somit einen breit angelegten Einstieg in den Umgang mit MATLAB und Tools. In diesem Buch soll ein anderer, d.h. ein mehr problemorientierter Weg beschritten werden. Dazu musste zunächst ein Kompromiss zwischen Grundlagen und Anwendungen gefunden werden. Die Grundlagen beziehen sich auf die mathematische Modellbildung, auf die numerischen Methoden sowie letztendlich auf die Umsetzung in einen MATLAB Code. Die Anwendungen beziehen sich auf phänomenologische Fragestellungen und die Visualisierung. Es sollten zunächst einmal fundamentale Begriffe, Zusammenhänge und Methoden verstanden worden sein.

Numerical Computing with Simulink, Volume 1 Richard J. Gran, 2007-01-01

An introduction to computer aided system design with Simulink, a robust, accurate and easily used simulation tool. The author takes readers on a tour of the Simulink environment that shows how to develop a system model and execute the design steps needed to make the model into a functioning design laboratory. Included along the way are the mathematics of systems, difference equations and z transforms, ordinary differential equations, both linear and nonlinear, and Laplace transforms and numerical methods for solving differential equations. Because specific applications require specific tools, this book introduces additional software packages that work within the Simulink environment. The author covers over 70 applications taken from several disciplines and describes numerous tested, annotated and reusable models and blocks to help readers apply the book's material to their own applications. Ideal for practising engineers and students in model based design and numerical methods. Additional material is also available online.
