Msc Mathematics Model Question Paper:

Mathematics in Berlin Heinrich Begehr, Helmut Koch, Jürg Kramer, Norbert Schappacher, Ernst-Jochen Thiele, 1998-07-21 This little book is conceived as a service to mathematicians attending the 1998 International Congress of Mathematicians in Berlin. It presents a comprehensive condensed overview of mathematical activity in Berlin from Leibniz almost to the present day without however including biographies of living mathematicians. Since many towering figures in mathematical history worked in Berlin, most of the chapters of this book are concise biographies. These are held together by a few survey articles presenting the overall development of entire periods of scientific life at Berlin. Overlaps between various chapters and differences in style between the chapters were inevitable but sometimes this provided opportunities to show different aspects of a single historical event for instance the Kronecker-Weierstrass controversy. The book aims at readability rather than scholarly completeness. There are no footnotes only references to the individual bibliographies of each chapter. Still we do hope that the texts brought together here and written by the various authors for this volume constitute a solid introduction to the history of Berlin mathematics.

Controlling Epidemics With Mathematical and Machine Learning Models Varghese, Abraham, Lacap, Jr., Eduardo M., Sajath, Ibrahim, Kumar, M. Kamal, Kolamban, Shajidmon, 2022-10-21. Communicable diseases have been an important part of human history. Epidemics afflicted populations causing many deaths before gradually fading away and emerging again years after. Epidemics of infectious diseases are occurring more often and spreading faster and further than ever in many different regions of the world. The scientific community in addition to its accelerated efforts to develop an effective treatment and vaccination is also playing an important role in advising policymakers on possible non-pharmacological approaches to limit the catastrophic impact of epidemics using mathematical and machine learning models. *Controlling Epidemics With Mathematical and Machine Learning Models* provides mathematical and machine learning models for epidemical diseases with special attention given to the COVID-19 pandemic. It gives mathematical proof of the stability and size of diseases. Covering topics such as compartmental models, reproduction number and SIR model simulation, this premier reference source is an essential resource for statisticians, government officials, health professionals, epidemiologists, sociologists, students and educators of higher education, librarians, researchers and academicians.
