Draft ,2000 Review of the EPA's Economic Analysis of Final Water Quality Standards for Nutrients for Lakes and Flowing Waters in Florida National Research Council,Division on Earth and Life Studies,Water Science and Technology Board,Committee to Review EPA's Economic Analysis of Final Water Quality Standards for Nutrients for Lakes and Flowing Waters in Florida,2012-06-05 The Environmental Protection Agency s estimate of the costs associated with implementing numeric nutrient criteria in Florida s waterways was significantly lower than many stakeholders expected This discrepancy was due in part to the fact that the Environmental Protection Agency s analysis considered only the incremental cost of reducing nutrients in waters it considered newly impaired as a result of the new criteria not the total cost of improving water quality in Florida The incremental approach is appropriate for this type of assessment but the Environmental Protection Agency s cost analysis would have been more accurate if it better described the differences between the new numeric criteria rule and the narrative rule it would replace and how the differences affect the costs of implementing nutrient reductions over time instead of at a fixed time point Such an analysis would have more accurately described which pollutant sources for example municipal wastewater treatment plants or agricultural operations would bear the costs over time under the different rules and would have better illuminated the uncertainties in making such cost estimates **EPA-5** ,1980-12

Welt,2013-06-29 A first of its kind the Seafood Regulatory Compliance Manual is a comprehensive work that comprises the myriad of governmental requirements and guidelines applicable to all aspects of seafood from harvest to the marketplace The intent of the authors was to develop for users a manual that is easy to use with a structured format to ensure compliance with governmental requirements They have been highly successful in achieving this objective and presenting a user friendly tool The manual represents a major advancement by providing a single source reference to all requirements except for some specific end product and labeling requirements for a highly complex global industry In addition it is an outstanding contribution to the seafood industry in addressing a long standing need for systems changes in the form of a single source manual in contrast to the obsolete approach of having to access a library of multiple regulations and the affiliated agencies bureaucracies to determine how and or whether compliance with a particular regulation has been achieved For those engaged in international commerce in seafood the manual should be especially useful Well integrated throughout the manual are the applicable provisions of the recommended international Codex standards for fish and shellfish products and the codes of hygienic and technological practice for handling and processing these products These standards and codes were developed through an international harmonization process and are familiar to seafood producing countries worldwide EPA Publications Bibliography United States.
