*The Evolution of Agency* Michael Tomasello, 2022-09-06 A leading developmental psychologist proposes an evolutionary pathway to human psychological agency Nature cannot build organisms biologically prepared for every contingency they might possibly encounter Instead Nature builds some organisms to function as feedback control systems that pursue goals make informed behavioral decisions about how best to pursue those goals in the current situation and then monitor behavioral execution for effectiveness Nature builds psychological agents In a bold new theoretical proposal Michael Tomasello advances a typology of the main forms of psychological agency that emerged on the evolutionary pathway to human beings Tomasello outlines four main types of psychological agency and describes them in evolutionary order of emergence First was the goal directed agency of ancient vertebrates then came the intentional agency of ancient mammals followed by the rational agency of ancient great apes ending finally in the socially normative agency of ancient humans Each new form of psychological organization represented increased complexity in the planning decision making and executive control of behavior Each also led to new types of experience of the environment and in some cases of the organism's own psychological functioning leading ultimately to humans experience of an objective and normative world that governs all of their thoughts and actions Together these proposals constitute a new theoretical framework that both broadens and deepens current approaches in evolutionary psychology

*Evolutionary Systems* G. Vijver, Stanley N. Salthe, M. Delpo, 2013-04-17 The three well known revolutions of the past centuries the Copernican the Darwinian and the Freudian each in their own way had a deflating and mechanizing effect on the position of humans in nature They opened up a richness of disillusion earth acquired a more modest place in the universe the human body and mind became products of a long material evolutionary history and human reason instead of being the central immaterial locus of understanding was admitted into the theater of

discourse only as a materialized and frequently out of control actor Is there something objectionable to this picture Formulated as such probably not Why should we resist the idea that we are in certain ways and to some degree physically biologically or psychically determined Why refuse to acknowledge the fact that we are materially situated in an ever evolving world Why deny that the ways of inscription traces of past events and processes are co determinative of further evolutionary pathways Why minimize the idea that each intervention of each natural being is temporally and materially situated and has as such the inevitable consequence of changing the world The point is however that there are many more or less radically different ways to consider the mechanization of man and nature There are in particular many ways to get the message of material and evolutionary determination as well as many levels at which this determination can be thought of as relevant or irrelevant

**Beyond Nature and Nurture** Javier Pérez-Jara,Íñigo Ongay,2025-05-28 This book gathers several of the world s leading scholars in the nature vs nurture debate offering a timely reconsideration of the dynamic interactions between physical chemical biological social and cultural factors that shape human multidimensionality Emphasizing this multidimensionality this edited volume seeks to bridge the divide between biology and social theory two research communities that have too often overlooked each other These disciplines despite being central to understanding human nature have long operated in isolation While some animal species exhibit higher degrees of phenotypic plasticity in specific traits humans stand out as the most plastic species in both their neurological and sociocultural systems This plasticity leads the contributors of this book to move beyond both biological reductionism and the blank slate hypothesis While biology undoubtedly plays a role in shaping and stabilizing human social and cultural processes it does so only within the framework of an inherently social environment one shaped by historically contingent and socially constructed realities such as values codes and cultural perceptions More importantly cultural structures and social interactions actively shape and transform certain biological features that were once considered immutable This book lays the groundwork for a productive dialogue among biologists psychologists social theorists and philosophers It also highlights some of the moral and political consequences of different perspectives within the nature vs nurture debate Through updated scientific and philosophical theorizing the chapters in this book aim to overcome once and for all the simplistic yet persistent opposition between nature and nurture offering a far more complex and dynamic yet richer and epistemologically manageable picture of the human being

**A Fractal Epistemology for a Scientific Psychology** Terry Marks-Tarlow,Yakov Shapiro,Katthe P. Wolf,Harris L. Friedman,2020-01-06 Fractal dynamics provide an unparalleled tool for understanding the evolution of natural complexity throughout physical biological and psychological realms This book s conceptual framework helps to reconcile several persistent dichotomies in the natural sciences including mind brain linear nonlinear subjective objective and even personal transpersonal processes A fractal approach is especially useful when applied to recursive processes of consciousness both within their ordinary and anomalous manifestations This novel way to study the interconnection of seemingly divided wholes encompasses multiple dimensions of experience and being It brings together experts in diverse fields neuropsychologists psychiatrists physicists physiologists psychoanalysts mathematicians and professors of religion and music composition to demonstrate the value of fractals as model method and metaphor within psychology and related social and physical sciences The result is a new perspective for understanding what has often been dismissed as too subjective idiosyncratic and ineffably beyond the scope of science bringing these areas back into a natural scientific framework

Artificial Intelligence and Universal Values Jay Friedenber,2024-07-14 The field of

value alignment or more broadly machine ethics is becoming increasingly important as artificial intelligence developments accelerate. By alignment we mean giving a generally intelligent software system the capability to act in ways that are beneficial or at least minimally harmful to humans. There are a large number of techniques that are being experimented with but this work often fails to specify what values exactly we should be aligning. When making a decision an agent is supposed to maximize the expected utility of its value function. Classically this has been referred to as happiness but this is just one of many things that people value. In order to resolve this issue we need to determine a set of human values that represent humanity's interests. Although this problem might seem intractable, research shows that people of various cultures and religions actually share more in common than they realize. In this book we review world religions, moral philosophy, and evolutionary psychology to elucidate a common set of shared values. We then show how these values can be used to address the alignment problem and conclude with problems and goals for future research. The key audience for this book will be researchers in the field of ethics and artificial intelligence who are interested in or working on this problem. These people will come from various professions and include philosophers, computer programmers, and psychologists as the problem itself is multi-disciplinary.
