Artificial Unintelligence Meredith Broussard,2019-01-29 A software developer s misadventures in computer programming machine learning and artificial intelligence reveal why we should never assume technology always get it right In Artificial Unintelligence Meredith Broussard argues that our collective enthusiasm for applying computer technology to every aspect of life has resulted in a tremendous amount of poorly designed systems We are so eager to do everything digitally hiring driving paying bills even choosing romantic partners that we have stopped demanding that our technology actually work Broussard a software developer and journalist reminds us that there are fundamental limits to what we can and should do with technology With this book she offers a guide to understanding the inner workings and outer limits of technology and issues a warning that we should never assume that computers always get things right Making a case against technochauvinism the belief that technology is always the solution Broussard argues that it s just not true that social problems would inevitably retreat before a digitally enabled Utopia To prove her point she undertakes a series of adventures in computer programming She goes for an alarming ride in a driverless car concluding the cyborg future is not coming any time soon uses artificial intelligence to investigate why students can t pass standardized tests deploys machine learning to predict which passengers survived the Titanic disaster and attempts to repair the U S campaign finance system by building AI software If we understand the limits of what we can do with technology Broussard tells us we can make better choices about what we should do with it to make the world better for everyone

Elementary Mathematics Curriculum Materials Janine T. Remillard,Ok-Kyeong Kim,2020-03-16 The book presents comparative analyses of five elementary mathematics curriculum programs used in the U S from three different perspectives the mathematical emphasis the pedagogical approaches and how authors communicate with teachers These perspectives comprise a framework for examining what curriculum materials are comprised of what is involved in reading and interpreting them and how curriculum authors can

and do support teachers in this process Although the focus of the analysis is 5 programs used at a particular point in time this framework extends beyond these specific programs and illuminates the complexity of curriculum materials and their role in teaching in general Our analysis of the mathematical emphasis considers how the mathematics content is presented in each program in terms of sequencing the nature of mathematical tasks cognitive demand and ongoing practice and the way representations are used Our analysis of the pedagogical approach examines explicit and implicit messages about how students should interact with mathematics one another the teacher and the textbook around these mathematical ideas as well as the role of the teacher In order to examine how curriculum authors support teachers we analyze how they communicate with teachers and what they communicate about including the underlying mathematics noticing student thinking and rationale for design elements The volume includes a chapter on curriculum design decisions based on interviews with curriculum authors

Curriculum Compacting Sally M. Reis, Joseph S. Renzulli, Deborah E. Burns, 2021-09-03 Curriculum compacting is one of the most well researched and commonly used ways of differentiating instruction to challenge advanced learners This practical and inexpensive method of differentiating both content and instruction enables classroom teachers to streamline the regular curriculum ensure students mastery of basic skills and provide time for stimulating enrichment and acceleration activities With information on the history and rationale of curriculum compacting as well as successful implementation strategies and multiple case studies the second edition of Curriculum Compacting introduces the strategies that teachers need to understand to implement this differentiation strategy for high potential highly motivated and academically talented and gifted students 2017 NAGC Book of the Year Award Winner

Standards-based School Mathematics Curricula Sharon L. Senk, Denisse R. Thompson, 2020-07-24 The Curriculum and Evaluation Standards for School Mathematics published by the National Council of Teachers of Mathematics in 1989 set forth a broad vision of mathematical content and pedagogy for grades K 12 in the United States These Standards prompted the development of Standards based mathematics curricula What features characterize Standards based curricula How well do such curricula work To answer these questions the editors invited researchers who had investigated the implementation of 12 different Standards based mathematics curricula to describe the effects of these curricula on students learning and achievement and to provide evidence for any claims they made In particular authors were asked to identify content on which performance of students using Standards based materials differed from that of students using more traditional materials and content on which performance of these two groups of students was virtually identical Additionally four scholars not involved with the development of any of the materials were invited to write critical commentaries on the work reported in the other chapters Section I of Standards Based School Mathematics Curricula provides a historical background to place the current curriculum reform efforts in perspective a summary of recent recommendations to reform school mathematics and a discussion of issues that arise when conducting research on student outcomes Sections II III and IV are devoted to research on mathematics curriculum projects for elementary middle and high schools respectively The final section is a commentary by Jeremy Kilpatrick Regents Professor of Mathematics Education at the University of Georgia on the research reported in this book It provides a historical perspective on the use of research to guide mathematics curriculum reform in schools and makes additional recommendations for further research In addition to the references provided at the end of each chapter other references about the Standards based curriculum projects are provided at the end of the book This volume is a valuable resource for all participants in discussions about school mathematics curricula including professors and graduate students interested in mathematics education curriculum development program evaluation

or the history of education educational policy makers teachers parents principals and other school administrators The editors hope that the large body of empirical evidence and the thoughtful discussion of educational values found in this book will enable readers to engage in informed civil discourse about the goals and methods of school mathematics curricula and related research
