A Manual of Paper Chromatography and Paper Electrophoresis Richard J. Block,Emmett L. Durrum,Gunter Zweig,2013-10-22 A Manual of Paper Chromatography and Paper Electrophoresis provides a comprehensive discussion of the techniques of paper chromatography and paper electrophoresis The book is organized into two parts Part I on paper chromatography provides a readily accessible source for some of the many uses and adaptations of paper chromatography An effort has been made to write a practical manual in which tried and proved procedures employing relatively simple equipment and available reagents are summarized Part II on paper electrophoresis discusses basic principles and methodology The emphasis throughout has been on the separation of protein mixtures particularly blood serum This reflects the fact that it is in this particular application that paper electrophoresis has thus far not been challenged by paper chromatography whereas many of the smaller molecules can be resolved equally well or better by the thus far more widely employed chromatographic procedures

Modern Pharmacology And Toxicology Dr. Shahid Sami Siddique, Dr. Yashvant Rao, Dr. Shanthi Natarajan, Dr. Ankit Singh Shekhawat, 2023-02-14. Modern pharmacology and toxicology is a branch of medicine, biology and the pharmaceutical sciences that studies how drugs and medicines work. A drug can be any molecule whether it is made in a lab, found in nature or made by the body itself. To describe any species, either endogenous or foreign, that influences the biochemistry or physiology of a cell, tissue, organ or organism, the term pharmacokinetics is occasionally used. The study of interactions between living things and substances that influence both normal and aberrant biochemical activity is what it is known as in more particular terms. Pharmaceuticals are any compounds that may be used to treat or prevent disease. Toxicology is a field that draws from many other scientific disciplines; hence the work and interests of toxicologists span many areas. As we now know, that all compounds may cause toxicity according to the exposure time and dosage, toxicologists are primarily interested in the mechanisms of action of various agents. Nonetheless, scientists are currently trying to determine the routes of endogenous molecules that are affected by even the most well known and ancient substances which results in toxicity.
