Cooper, Leila M. Shultz, Kimball T. Harper, 2012-01-06 A comprehensive guide that includes a vast range of species and plant communities and employs thorough original keys Based primarily on

vegetative characteristics the keys don't require that flowers or other reproductive features be present like many plant guides. And this guide's attention to woody plants as a whole allows one to identify a much greater variety of plants. That especially suits an arid region such as Utah with less diverse native trees. Woody plants are those that have stems that persist above ground even through seasons that don't favor growth due to low precipitation or temperatures. Woody Plants of Utah employs dichotomous identification keys that are comparable to a game of twenty questions. They work through a process of elimination by choosing sequential alternatives. Detailed illustrated plant descriptions complement the keys and provide additional botanical and environmental information in relation to a useful introductory categorization of Utah plant communities. Supplementary tools include photos, distribution maps, and an illustrated glossary.

Raptor Research and Management Techniques. Keith L. Bildstein, David Michael Bird, 2007. Think about how we know about past events in human history, e.g., the expansion of the Roman Empire or the American Revolution. What types of records document those events? Now think about Earth's history, specifically the past environmental or climatic conditions at times before recorded human history. What records might there be of such conditions? Make a list of your ideas. An assemblage of five major types of natural archives of Earth's environmental and climatic history. What common features do each of these paleoclimate archives share? An assemblage of 5 major types of natural records or archives of Earth's environmental and climatic history. Just like a diary or other historical document, the layers in these natural archives contain indirect evidence, i.e., proxies, about past conditions and events recorded in a sequential order. The evidence is specific to a certain time period and may be general or very detailed, depending on the rate that information was recorded. The faster the rate at which the recorder grew trees and corals, accumulated snow and ice, or was deposited sedimentary sequences, the more detailed the record is and the higher its resolution. For example, a record in which an annual signal can be observed has a very high resolution. In contrast, if the finest observable details are on the order of a million years, then that record would have a low resolution.
