Feeding Relationships Activity - Food Chains

This lab was created by Mr. Buckley from Edward Knox High School. Credit is given for this original activity to Mr. Buckley.

The mouse eats the red clover plant, and then an owl snatches the mouse. This series of events is called a food chain. A food chain can be described as a means of transferring energy from one organism to another. For most organisms, the only source of energy available to begin the chain is the sun. Therefore, the food chains we will study will start with the sun. Only autotrophs such as green plants and algae can convert sunlight into food. The mouse that consumes the grass seeds gets its energy from the sun through the plant. The owl in turn receives the sun's energy from eating the mouse. The food chain could be diagrammed as:

sun ----> red clover ----> mouse ----> owl

Each animal and plant can be thought of as a link in a chain. The sun is not usually included in the food chain diagram because it is assumed that we know the sun is in every food chain. An example of a three-link food chain is: grass - mouse - owl.

Notice that the arrow always points in the direction of the movement of energy.

There are millions of simple food chains that include a plant, a plant eater and a meat eater, that is, a producer, a herbivore (primary consumer) and a carnivore (secondary or higher level consumer). Here are a few more examples of a threelink food chain:

water lilies ----> moose ----> wolf

grass ----> rabbit ----> fox

Four-linked food chains are also common. In a four-link food chain there are two omnivores and/or carnivores. The larger or better adapted animal kills and eats the previous organism in the link. Some examples of a fourlink food chain are:

leaf ----> caterpillar ----> shrew ----> badger

cattails ----> muskrat ----> weasels ----> GreatHorned Owl

1. What is the ultimate source of energy for most organisms and how is this energy captured so it is useful in a food chain? _____
2. What is a food chain? _____
3. Give an example of a four step food chain not listed in the examples above and label its levels of consumers and the producer organism. _____
4. What always starts off a food chain? _____ What ends it? _____
5. What is a carnivore? _____
