### Objectives

After all the mathematical and statistical theory discussed this morning, let's discuss some practical applications. One type of model involving differential equations is the logistic model. We will discuss this model in detail later. For now, let's just give a brief overview of the model. The logistic model is used to model the growth of a population. It is based on the idea that the growth of a population is limited by the resources available. The logistic model is a differential equation that can be solved to give a formula for the population at any time.

The logistic model is given by the following equation:

which is defined as the total population at any time.

population. The logistic model is a differential equation that can be solved to give a formula for the population at any time. The logistic model is based on the idea that the growth of a population is limited by the resources available. The logistic model is a differential equation that can be solved to give a formula for the population at any time.

1. Determine the initial value of the population at time  $t=0$ . The initial value of the population is given by the horizontal asymptote of the logistic model.

**Example 1: The logistic model.**

2. Determine the initial value of the population at time  $t=0$ . The initial value of the population is given by the horizontal asymptote of the logistic model.
