Zeleke, 2005 *The Honors Class* Ben Yandell, 2001-12-12 This eminently readable book focuses on the people of mathematics and draws the reader into their fascinating world In a monumental address given to the International Congress of Mathematicians in Paris in 1900 David Hilbert perhaps the most respected mathematician of his time developed a blueprint for mathematical research in the new century

Differential Geometry: Manifolds, Curves, and Surfaces Marcel Berger, Bernard Gostiaux, 2012-12-06 This book consists of two parts different in form but similar in spirit The first which comprises chapters 0 through 9 is a revised and somewhat enlarged version of the 1972 book *Geometrie Differentielle* The second part chapters 10 and 11 is an attempt to remedy the notorious absence in the original book of any treatment of surfaces in three space an omission all the more unforgivable in that surfaces are some of the most common geometrical objects not only in mathematics but in many branches of physics *Geometrie Differentielle* was based on a course I taught in Paris in 1969 70 and again in 1970 71 In designing this course I was decisively influenced by a conversation with Serge Lang and I let myself be guided by three general ideas First to avoid making the statement and proof of Stokes formula the climax of the course and running out of time before any of its applications could be discussed Second to illustrate each new notion with non trivial examples as soon as possible after its introduction And finally to familiarize geometry oriented students with analysis and analysis oriented students with geometry at least in what concerns manifolds

Poincaré and the Philosophy of Mathematics Janet M. Folina, 2016-07-27 This book is a sympathetic reconstruction of Henri Poincaré's anti realist philosophy of mathematics Although Poincaré is recognized as the greatest mathematician of the late 19th century his contribution to the philosophy of mathematics is not highly regarded Many regard his remarks as idiosyncratic and based upon a misunderstanding of logic and logicism This book argues that Poincaré's critiques are not

based on misunderstanding rather they are grounded in a coherent and attractive foundation of neo Kantian constructivism
