L. Moiseiwitsch, 2004-11-29 This graduate level text's primary objective is to demonstrate the expression of the equations of the various branches of mathematical physics in the succinct and elegant form of variational principles and thereby illuminate their interrelationship Its related intentions are to show how variational principles may be employed to determine the discrete eigenvalues for stationary state problems and to illustrate how to find the values of quantities such as

the phase shifts that arise in the theory of scattering Chapter by chapter treatment consists of analytical dynamics optics wave mechanics and quantum mechanics field equations eigenvalue problems and scattering theory 1966 edition

Pitt, Mathematics, 2012-01-01 Introductory treatment develops the theory of integration in a general context making it applicable to other branches of analysis More specialized topics include convergence theorems and random sequences and functions 1963 edition

Mathematics of Relativity George Yuri Rainich, 2014-11-19 Based on the ideas of Einstein and Minkowski this concise treatment is derived from the author s many years of teaching the mathematics of relativity at the University of Michigan Geared toward advanced undergraduates and graduate students of physics the text covers old physics new geometry special relativity curved space and general relativity Beginning with a discussion of the inverse square law in

terms of simple calculus the treatment gradually introduces increasingly complicated situations and more sophisticated mathematical tools Changes in fundamental concepts which characterize relativity theory and the refinements of mathematical technique are incorporated as necessary The presentation thus offers an easier approach without sacrifice of rigor Dover 2014 republication of the edition published by John Wiley Sons New York 1950 See every Dover book in print at www.doverpublications.com Mathematical Economics Kelvin Lancaster, 2012-10-10 Graduate level text provides complete and rigorous expositions of economic models analyzed primarily from the point of view of their mathematical properties followed by relevant mathematical reviews Part I covers optimizing theory Parts II and III survey static and dynamic economic models and Part IV contains the mathematical reviews which range from linear algebra to point to set mappings

Probabilistic Metric Spaces B. Schweizer, A. Sklar, 2011-11-30 This distinctly nonclassical treatment focuses on developing aspects that differ from the theory of ordinary metric spaces working directly with probability distribution functions rather than random variables The two part treatment begins with an overview that discusses the theory's historical evolution followed by a development of related mathematical machinery The presentation defines all needed concepts states all necessary results and provides relevant proofs The second part opens with definitions of probabilistic metric spaces and proceeds to examinations of special classes of probabilistic metric spaces topologies and several related structures such as probabilistic normed and inner product spaces Throughout the authors focus on developing aspects that differ from the theory of ordinary metric spaces rather than simply transferring known metric space results to a more general setting
