Jaredites & Manassites Robert F. Smith, 2022-12-28 This book explores the literate and advanced cultures of two very separate groups in the Book of Mormon 1 the Jaredites described in the book of Ether and 2 the members of tribal Manasseh who dominate the remainder of the Book of Mormon The first group flourished during the millennia before the arrival of the second group in a nearby area and became extinct as a civilization not long after the arrival of that second group Within the New World only one complex culture arose which was literate built great cities and had a large population namely the Olmec of southern Mexico the mother culture of the five subsequent advanced cultures of Mesoamerica This book demonstrates how the Mesopotamian Jaredites brought with them a Sumero Akkadian culture to the New World The linguistics of Sumero Akkadian are not only found systematically within the Jaredite onomasticon but a comparison of Sumero Akkadian with reconstructed ancient Olmec Proto Mixe Zoque strongly suggests the ultimate origin of that people in Mesopotamia at least 5 thousand years ago In the second section of the book an offshoot of tribal Manasseh Clan Lehi demonstrates its pervasive influence through an onomasticon almost exclusively showing derivation from Manassite names known from the Bible and archeology and which are collocated geographically with each other and with a set of names known biblically to be associated with transjordanian tribes and southern areas such as Midian where Clan Lehi first goes to make good its escape from Judah

The Silents of Jesus in the Cinema (1897-1927) David Shepherd,2016-03-31 While Jesus has attracted the sporadic interest of film makers since the epics of the Sixties it is often forgotten that between the advent of motion pictures in the 1890s and the close of the silent era at the end of the 1920s some of the longest most expensive and most watched films on both sides of the Atlantic were focused on the Life and Passion of the Christ Drawing upon rarely seen archival footage and the work of both the era s most important directors e g Alice Guy Ferdinand Zecca Sidney Olcott D W Griffith Carl Dreyer and C B DeMille and others who have been all but forgotten this collection of essays offers a representative survey of the Silents of Jesus illustrating the ways in which the earliest films and those which followed were influenced by a multiplicity of factors Written by leading scholars in biblical and early film studies this collection explores the ways in which the Silents of Jesus were shaped not only by the performing and visual arts of the nineteenth century and the technological challenges and opportunities of a new medium and industry but also by the artistic theological and ideological predilections of studios and directors and the expectations of audiences as the genre evolved Taken together the essays collected here offer a seminal treatment of the genesis and early evolution of the cinematic Jesus

The Application of Bioactive Materials in Bone Repair Hu Yan,Rui Zhou,Qiuyue Peng,Yori Endo,Chenchen Yan,2025-03-04 Biological activity in the field of materials mainly refers to the properties that can induce special biological and chemical reactions at the interface between materials and biological tissues forming chemical bonds between materials and biological tissues A bioactive material is a biomaterial that is able to participate in a regenerative process at the molecular level and dictate molecular and cellular events in a preferred and predictable way In the process of biomineralization the ability of biological material to chemically bond with living bone is an important index of the biomaterial and the biological activity of the material in vivo is reflected by the simulated body fluid SBF ability of apatite

formed on the surface of the material. In the field of bone repair, bioactive materials such as hydrogels, agglomerates, and magnetic nanoparticles are playing an increasingly important role. Compared with traditional bone repair materials, bioactive materials have many advantages such as high biocompatibility, simulation of the extracellular environment, and easy engineering modification. In addition, as a delivery system, bioactive materials are modified and engineered to be minimally invasive, targeted, and sustainably released. The above characteristics have important application value in the field of bone repair. This Research Topic aims to promote the use of bioactive materials in bone repair and recruit bioactive materials at the forefront of bone repair research. Here we discuss the properties and characterization of different kinds of bioactive materials. These materials mainly include: 1) bioactive materials for the molecular mechanism of bone repair; 2) bioactive materials for targeted drug delivery systems; 3) bioactive materials for injection or microneedles. The establishment of this Research Topic hopes to further promote the interdisciplinary interaction between medicine and industry, as well as to promote the clinical transformation and application of new biological materials. In this Research Topic, we welcome researchers to submit perspectives, original articles, reviews, comments, case reports, and letters on the topic, including but not limited to the following topics: new ways of preparing materials related to bone repair; advanced research on characterization, detection, and engineering modification of bioactive materials for bone repair; research on bioactive materials for bone repair through molecular mechanisms; research on bioactive materials for different interventions in bone repair; to summarize the current status of the application of bioactive materials in bone repair.
