Fig. 1. The mechanism of superoxide-induced gene silencing suggested as an alternative to endoreplication: one molecule from several thousands of participating molecules of the initiator of endoreplication (green) is converted into superoxide (red) and binds to the initiator of endoreplication. The formation of endoreplication origin is blocked very effectively because only a few molecules of initiator are available for endoreplication.

100% of the respondents were female, and 90% were aged 18 years or older. The majority of the respondents were from the United States (60%), followed by Canada (20%), and the United Kingdom (10%). The remaining respondents were from various other countries, including Australia, India, and South Africa.
