Special Relativity and Motions Faster than Light Moses Fayngold, 2008-09-08 While the theory of special relativity is often associated with the idea of traveling faster than light this book shows that in all these cases subtle forces of nature conspire to prevent these motions being harnessed to send signals faster than the speed of light The author tackles these topics both conceptually with minimal or no mathematics and quantitatively making use of numerous illustrations to clarify the discussion The result is a joy to read for both scientists familiar with the subject and laypeople wishing to understand something of special relativity

Waves: A Very Short Introduction Mike Goldsmith, 2018-11-15 We live in a world of waves The Earth shakes to its foundations the seas and oceans tremble incessantly sounds reverberate through land sea and air Beneath the skin our brains and bodies are awash with waves of their own and the Universe is filled by a vast spectrum of electromagnetic radiation of which visible light is the narrowest sliver Casting the net even wider there are mechanical waves quantum wave phenomena and the now clearly detected gravitational waves Look closer and deeper and more kinds of waves appear down to the most fundamental level of reality This Very Short Introduction looks at all the main kinds of wave their sources effects and uses Mike Goldsmith discusses how wave motion results in a range of phenomena from reflection diffraction interference and polarization in the case of light waves to beats and echoes for sound All waves however different share many of the same features and as Goldsmith shows for all their complexities many of their behaviours are fundamentally simple

Self Care **Islands in Geography, Law, and Literature** Chiara Battisti, Sidia Fiorato, Matteo Nicolini, Thomas Perrin, 2022-04-04 This collection explores the heterogeneous places we have traditionally been taught to term islands. It stages a conversation on the very idea of islandness, thus contributing to a new field of research at the crossroads of law, geography, literature, urban planning, politics, arts, and cultural studies. The contributions to this volume discuss the notion of islandness as a device triggering the imagination, triggering narratives and representations in different creative fields; they explore the interactions between legal, socio-political, and fictional approaches to remoteness and the state of insularity; policy responses to both remoteness and boundaries on different scales; and the insular legal framing of geographical remoteness. The product of a cross-disciplinary exchange on islands, this edited volume will be of great interest to those working in the fields of Island Studies, as well as literary studies, scholars, geographers, and legal scholars. **Beginning and Intermediate Algebra** Margaret L. Lial, E. These themes become evident in the writing and pedagogy throughout the fourth edition.
